---

`BSgenome.Ptroglobutes.UCSC.panTro2.masked`

*Full masked genome sequences for Pan troglodytes (UCSC version panTro2)*

---

## Description

Full genome sequences for Pan troglodytes (Chimp) as provided by UCSC (panTro2, Mar. 2006) and stored in Biostrings objects. The sequences are the same as in `BSgenome.Ptroglobutes.UCSC.panTro2`, except that each of them has the 4 following masks on top: (1) the mask of assembly gaps (AGAPS mask), (2) the mask of intra-contig ambiguities (AMB mask), (3) the mask of repeats from Repeat-Masker (RM mask), and (4) the mask of repeats from Tandem Repeats Finder (TRF mask). Only the AGAPS and AMB masks are "active" by default.

## Note

The masks in this `BSgenome` data package were made from the following source data files:

AGAPS masks: [gap.txt.gz](ftp://hgdownload.cse.ucsc.edu/goldenPath/panTro2/database/) from <ftp://hgdownload.cse.ucsc.edu/goldenPath/panTro2/database/>  
RM masks: <http://hgdownload.cse.ucsc.edu/goldenPath/panTro2/bigZips/chromOut.tar.gz>  
TRF masks: <http://hgdownload.cse.ucsc.edu/goldenPath/panTro2/bigZips/chromTrf.tar.gz>

See `?BSgenome.Ptroglobutes.UCSC.panTro2` in the `BSgenome.Ptroglobutes.UCSC.panTro2` package for information about how the sequences were obtained.

See `?BSgenomeForge` and the `BSgenomeForge` vignette (`vignette("BSgenomeForge")`) in the `BSgenome` software package for how to make a `BSgenome` data package.

## Author(s)

The Bioconductor Dev Team

## Examples

```
BSgenome.Ptroglobutes.UCSC.panTro2.masked
genome <- BSgenome.Ptroglobutes.UCSC.panTro2.masked
seqlengths(genome)
genome$chr1 # a MaskedDNAString object!
## To get rid of the masks altogether:
unmasked(genome$chr1) # same as BSgenome.Ptroglobutes.UCSC.panTro2$chr1

if ("AGAPS" %in% masknames(genome)) {

  ## Check that the assembly gaps contain only Ns:
  checkOnlyNsInGaps <- function(seq)
  {
    ## Replace all masks by the inverted AGAPS mask
    masks(seq) <- gaps(masks(seq)[["AGAPS"]])
    unique_letters <- uniqueLetters(seq)
    if (any(unique_letters != "N"))
      stop("assembly gaps contain more than just Ns")
  }

  ## A message will be printed each time a sequence is removed
  ## from the cache:
  options(verbose=TRUE)

  for (seqname in seqnames(genome)) {
    cat("Checking sequence", seqname, "... ")
    seq <- genome[[seqname]]
    checkOnlyNsInGaps(seq)
    cat("OK\n")
  }
}

## See the GenomeSearching vignette in the BSgenome software
## package for some examples of genome-wide motif searching using
## Biostrings and the BSgenome data packages:
if (interactive())
  vignette("GenomeSearching", package="BSgenome")
```
