

# Package ‘autonomics’

December 1, 2025

**Type** Package

**Title** Unified Statistical Modeling of Omics Data

**Version** 1.19.0

**Description** This package unifies access to Statistical Modeling of Omics Data.

Across linear modeling engines (lm, lme, lmer, limma, and wilcoxon).

Across coding systems (treatment, difference, deviation, etc).

Across model formulae (with/without intercept, random effect, interaction or nesting).

Across omics platforms (microarray, rnaseq, msproteomics, affinity proteomics, metabolomics).

Across projection methods (pca, pls, sma, lda, spls, oplis).

Across clustering methods (hclust, pam, cmeans).

Across survival methods (coxph, survdiff, coin).

It provides a fast enrichment analysis implementation.

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**VignetteBuilder** knitr

**biocViews** Software, DataImport, Preprocessing, DimensionReduction,  
PrincipalComponent, Regression, DifferentialExpression,  
GeneSetEnrichment, Transcriptomics, Transcription,  
GeneExpression, RNASeq, Microarray, Proteomics, Metabolomics,  
MassSpectrometry,

**BugReports**

<https://gitlab.uni-marburg.de/fb20/ag-graumann/software/autonomics/issues>

**RoxygenNote** 7.3.3

**Depends** R (>= 4.0)

**Imports** abind, arrow, BiocFileCache, BiocGenerics, bit64, cluster,  
codingMatrices, colorspace, data.table, dplyr, edgeR, ggforce,  
ggplot2, ggrepel, graphics, grDevices, grid, gridExtra, limma,  
lme4, magrittr, matrixStats, methods, MultiAssayExperiment,  
parallel, RColorBrewer, rlang, R.utils, readxl, S4Vectors,  
scales, stats, stringi, SummarizedExperiment, survival, tidyr,  
tidyselect, tools, utils, vsn

**Suggests** affy, AnnotationDbi, AnnotationHub, apcluster, Biobase, BiocManager, BiocStyle, Biostrings, coin, diagram, DBI, e1071, ensemblDb, GenomicDataCommons, GenomicRanges, GEOquery, ggstance, ggridges, ggtext, hgu95av2.db, ICSNP, jsonlite, knitr, lmerTest, MASS, mclust, mixOmics, mixtools, mpm, nlme, OlinkAnalyze, org.Hs.eg.db, org.Mm.eg.db, patchwork, pcaMethods, pheatmap, progeny, propagate, RCurl, RSQLite, remotes, rmarkdown, ropis, Rsubread, readODS, rtracklayer, statmod, testthat, UniProt.ws, writexl, XML

**git\_url** <https://git.bioconductor.org/packages/autonomics>

**git\_branch** devel

**git\_last\_commit** 9fc1276

**git\_last\_commit\_date** 2025-10-29

**Repository** Bioconductor 3.23

**Date/Publication** 2025-12-01

**Author** Aditya Bhagwat [aut, cre],  
Richard Cotton [aut],  
Vanessa Beutgen [ctb],  
Witold Szymanski [ctb],  
Shahina Hayat [ctb],  
Laure Cougnaud [ctb],  
Hinrich Goehlmann [sad],  
Karsten Suhre [sad],  
Johannes Graumann [aut, sad]

**Maintainer** Aditya Bhagwat <aditya.bhagwat@uni-marburg.de>

|        |                                |
|--------|--------------------------------|
| .coxph | <i>Fit onefeature survival</i> |
|--------|--------------------------------|

Description

Fit onefeature survival

Usage

```
.coxph(sd, formula)

.survdiff(sd, formula)

.logrank(sd, formula)
```

Arguments

|         |               |
|---------|---------------|
| sd      | data.table    |
| formula | model formula |

Examples

```
# Dataset
sd <- survobj()
sd %<>% sumexp_to_longdt( svars = c('timetoevent', 'event', 'age', 'sex'), assay = 'exprs2levels')
sd[, value := code(factor(value), 'code_control')]
sd[, age := code(factor(age ), 'code_control')]
sd[, sex := code(factor(sex ), 'code_control')]

# Singlefactor - coxph, survdiff, logrank
.survdiff(sd, survival::Surv(timetoevent, event) ~ value)
.logrank(sd, survival::Surv(timetoevent, event) ~ value)
.coxph(sd, survival::Surv(timetoevent, event) ~ value)
.coxph(sd, survival::Surv(timetoevent, event) ~ age/value)
```

---

|            |           |
|------------|-----------|
| .densities | Densities |
|------------|-----------|

---

**Description**

Densities

**Usage**

```
.densities(x, xpred = x)

densities(x, xpred = x, plot = TRUE, color = "#F8766D")
```

**Arguments**

|       |                                   |
|-------|-----------------------------------|
| x     | numeric vector: data points       |
| xpred | numeric vector: prediction points |
| plot  | whether to plot                   |
| color | string                            |

**Value**

numeric vector with same length as xpred

**Examples**

```
set.seed(1)
x <- c(rnorm(20, 3), rnorm(20,7), rnorm(20, 11))
xpred <- seq(min(x), max(x), length.out = 100)
.densities(x, xpred) # innerfun
densities(x, xpred) # outerfun
```

---

|                     |                              |
|---------------------|------------------------------|
| .extract_p_features | Extract coefficient features |
|---------------------|------------------------------|

---

**Description**

Extract coefficient features

**Usage**

```
.extract_p_features(  
  object,  
  coefs,  
  p = 0.05,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_fdr_features(  
  object,  
  coefs,  
  fdr = 0.05,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_effectsize_features(  
  object,  
  coefs,  
  effectsize = 1,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_n_features(  
  object,  
  coefs,  
  combiner = "|",  
  n,  
  fit = fits(object)[1],  
  features = NULL,  
  verbose = TRUE  
)  
  
extract_contrast_features(  
  object,  
  fit = fits(object)[1],  
  coefs = autonomics::coefs(object, fit = fit),  
  combiner = "|",  
  decreasing = FALSE,  
  p = 1,
```

```

    fdr = 1,
    effectsize = 0,
    sign = c(-1, +1),
    n = 4,
    features = NULL,
    verbose = TRUE
  )

```

## Arguments

|            |                                                       |
|------------|-------------------------------------------------------|
| object     | SummarizedXExperiment                                 |
| coefs      | NULL/character: subset of coefs(object)               |
| p          | p threshold                                           |
| fit        | character: subset of fits(object)                     |
| combiner   | ' ' or '&': how to combine multiple fits/coefs        |
| features   | features to include no matter what (character vector) |
| verbose    | TRUE or FALSE                                         |
| fdr        | fdr threshold                                         |
| effectsize | effectsize threshold                                  |
| n          | number of top features (Inf means all)                |
| decreasing | TRUE or FALSE                                         |
| sign       | effect sign                                           |

## Value

SummarizedExperiment

## Examples

```

## Details

Defaults for various Q value cutoffs correspond to recommendations by the DIA-NN team for DIA-NN v.2 (as of 03.2025). Of these, the reader of the legacy file format (flat tab separated values, pre-DIA-NN v.2) only utilizes Lib.PG.Q.

## Value

data.table or SummarizedExperiment

## Examples

```
# Read
file <- download_data('dilution.report.tsv')
.read_diann_precursors(file)      # precursors longdt
.read_diann_proteingroups(file)   # proteingroups longdt
fdt(read_diann_proteingroups(file)) # proteingroups sumexp

# Compare
PR <- .read_diann_precursors(file)
PG <- .read_diann_proteingroups(file)
PG[intensity==top1] # matches      : 24975 (85%) proteingroups
PG[intensity!=top1] # doesnt match : 4531 (15%) proteingroups
RUN <- 'IPT_HeLa_1_DIAstd_Slot1-40_1_9997'
PR[uniprot=='Q96JP5;Q96JP5-2' & run == RUN, 1:6] # match:      8884 ==      8884
PR[uniprot=='P36578' & run == RUN, 1:6] # no match: 650887 != 407978
PR[intensity != top1][feature_id == unique(feature_id)[1]][run == unique(run)[1]][1:2, 1:6]
PR[intensity != top1][feature_id == unique(feature_id)[2]][run == unique(run)[1]][1:2, 1:6]
PR[intensity != top1][feature_id == unique(feature_id)[3]][run == unique(run)[1]][1:3, 1:6]
```

---

`.read_maxquant_proteingroups`*Read proteingroups/phosphosites as-is*

---

## Description

Read proteingroups/phosphosites as-is

## Usage

```
.read_maxquant_proteingroups(  
  file,  
  quantity = guess_maxquant_quantity(file),  
  verbose = TRUE  
)  
  
.read_maxquant_phosphosites(  
  file,  
  profile,  
  quantity = guess_maxquant_quantity(file),  
  verbose = TRUE  
)
```

## Arguments

|                       |                                   |
|-----------------------|-----------------------------------|
| <code>file</code>     | proteingroups / phosphosites file |
| <code>quantity</code> | string                            |
| <code>verbose</code>  | TRUE / FALSE                      |
| <code>profile</code>  | proteingroups file                |

## Value

data.table

## Examples

```

Value

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
object %<>% add_adjusted_pvalues()
fdt(object)
fdt(add_facetvars(object))
```

---

```
add_opentargets_by_uniprot
      Add opentargets annotations
```

---

**Description**

Add opentargets annotations

**Usage**

```
add_opentargets_by_uniprot(
  object,
  cols = c("genesymbol", "genename", "function"),
  verbose = TRUE
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| cols    | character vector     |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% add_opentargets_by_uniprot()
```

---

`add_psp`*Add psp*

---

**Description**

Add PhosphoSitePlus literature counts

**Usage**

```
add_psp(  
  object,  
  pspfile = file.path(R_user_dir("autonomics", "cache"), "phosphositeplus",  
    "Phosphorylation_site_dataset.gz")  
)
```

**Arguments**

|                      |                      |
|----------------------|----------------------|
| <code>object</code>  | SummarizedExperiment |
| <code>pspfile</code> | phosphositeplus file |

**Details**

Go to [www.phosphosite.org](http://www.phosphosite.org)  
Register and Login.  
Download `Phosphorylation_site_dataset.gz`.  
Save into: `file.path(R_user_dir('autonomics','cache'),'phosphositeplus')`

**Value**

SummarizedExperiment

**Examples**

```
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')  
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_phosphosites(fosfile = fosfile, profile = profile)  
fdt(object)  
object %<>% add_psp()  
fdt(object)
```

---

`add_smiles`*Add smiles*

---

**Description**

Add smiles

**Usage**

```
add_smiles(object)
```

**Arguments**

`object` character/factor vector with pubchem ids

**Value**

character/factor vector

**References**

<https://pubchemdocs.ncbi.nlm.nih.gov/pug-rest-tutorial>

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
# add_smiles(object[1:10, ]) # seems down
```

---

`altenrich`*Alternative Enrichment Analysis*

---

**Description**

Alternative Enrichment Analysis

**Usage**

```
altenrich(
  object,
  pathwaydt,
  genevar = "gene",
  genesep = "[ ,;]",
  coef = autonomics::coefs(object)[1],
  fit = fits(object)[1],
  significancevar = "p",
```

```
significance = 0.05,
effectsize = 0,
n = 3,
genes = FALSE,
verbose = TRUE
)
```

Arguments

|                 |                                                            |
|-----------------|------------------------------------------------------------|
| object          | SummarizedExperiment                                       |
| pathwaydt       | data.table, e.g. <a href="#">read_msigt</a>                |
| genevar         | gene fvar                                                  |

| n               | no of detected genes required (for geneset to be examined) |
| genes           | whether to record genes                                    |
| verbose         | whether to msg                                             |

Details

This is an alternative enrichent analysis implementation. It is more modular: uses four times `.enrichment(VERBOSE)?` as backend. But also four times slower than `enrichment`, so not recommended. It is retained for testing purposes.

This alternative enrichment implementation

|----------|-------------------------|
| analysis | <i>Get/set analysis</i> |
|----------|-------------------------|

---

Description

Get/set analysis

**Usage**

```
analysis(object)

## S4 method for signature 'SummarizedExperiment'
analysis(object)

analysis(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,list'
analysis(object) <- value
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| value  | list                 |

**Value**

analysis details (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
analysis(object)
```

---

|         |                |
|---------|----------------|
| analyze | <i>Analyze</i> |
|---------|----------------|

---

**Description**

Analyze

**Usage**

```
analyze(
  object,
  pca = TRUE,
  pls = TRUE,
  fit = "limma",
  formula = ~subgroup,
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control",
  contrasts = NULL,
  coefs = contrast_coefs(object, formula = formula, drop = drop, coding = coding),
  block = NULL,
  weightvar = if ("weights" %in% assayNames(object)) "weights" else NULL,
```

```

plot = pca & !is.null(fit),
label = "feature_id",
palette = NULL,
verbose = TRUE
)

```

## Arguments

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Value

SummarizedExperiment

## Examples

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% analyze()

```

---

annotate\_compounddiscoverer  
*Read compound discoverer output*

---

## Description

Read compound discoverer output

## Usage

```
annotate_compounddiscoverer(
  x,
  dir = getwd(),
  files = list.files(path = dir, pattern = ".*masslist.*\\.xlsx$", ignore.case = TRUE,
    full.names = TRUE),
  verbose = TRUE
)
```

## Arguments

|         |                                                |
|---------|------------------------------------------------|
| x       | SummarizedExperiment (read_compounddiscoverer) |
| dir     | compound discoverer output directory           |
| files   | compound discoverer masslist files             |
| verbose | TRUE or FALSE : message ?                      |

## Value

SummarizedExperiment

---

annotate\_maxquant      *Annotate maxquant*

---

## Description

Annotate maxquant data.table

## Usage

```
annotate_maxquant(
  dt,
  uniprothdrs,
  contaminanthdrs,
  maxquanthdrs,
  restapi = FALSE,
  verbose = TRUE
)
```

**Arguments**

|                 |                                                                    |
|-----------------|--------------------------------------------------------------------|
| dt              | data.table : output of read_maxquant_(proteingroups phosphosites)  |
| uniprothdrs     | data.table : output of read_uniprot                                |
| contaminanthdrs | data.table : output of read_uniprot                                |
| maxquanthdrs    | data.table : output of read_uniprot                                |
| restapi         | logical(1) : use uniprot restapi to complete missing annotations ? |
| verbose         | logical(1) : message ?                                             |

**Details**

Uncollapse, annotate, curate, recollapse, name

**Value**

data.table

**Examples**

```
# Fukuda 2020: contaminants + maxquanthdrs
#-----
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
dt <- .read_maxquant_proteingroups(file)
dt[, 1:2]
uniprothdrs <- NULL
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(dt$`Fasta headers`); dt$`Fasta headers` <- NULL
dt %<>% annotate_maxquant(uniprothdrs, contaminanthdrs, maxquanthdrs)
dt[, 1:9]
dt[reverse== '+', 1:9]
dt[contaminant== '+', 1:9]

# Billing 2019: uniprothdrs + contaminants + maxquanthdrs
#-----
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')

upfile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
prodt <- .read_maxquant_proteingroups(profile); prodt[, 1:2]
fosdt <- .read_maxquant_phosphosites(fosfile, profile); fosdt[, 1:3]
uniprothdrs <- read_uniprot(upfile)
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(prodt$`Fasta headers`)
annotate_maxquant(prodt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
annotate_maxquant(fosdt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
```

---

annotate\_uniprot\_rest *Annotate uniprot/ensp*

---

## Description

Annotate uniprot/ensp

## Usage

```
annotate_uniprot_rest(x, columns = UNIPROTCOLS, verbose = TRUE)
```

## Arguments

|         |                  |
|---------|------------------|
| x       | character vector |
| columns | character vector |
| verbose | TRUE or FALSE    |

## Value

data.table(dbid, uniprot, reviewed, protein, gene, canonical, isoform, fragment, existence, organism, full)

## Examples

```
# works, but sometimes fails during check
annotate_uniprot_rest( x = c('P00761', 'Q32MB2') )
annotate_uniprot_rest( x = c('ENSBTAP00000006074', 'ENSP00000377550') )
```

---

assert\_is\_valid\_sumexp

*Assert that x is a valid SummarizedExperiment*

---

## Description

Assert that x is a valid SummarizedExperiment

## Usage

```
assert_is_valid_sumexp(x, .xname = get_name_in_parent(x))
```

## Arguments

|        |                        |
|--------|------------------------|
| x      | SummarizedExperiment   |
| .xname | see get_name_in_parent |

**Value**

TRUE or FALSE

**Examples**

```
# VALID
  file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
  x <- read_metabolon(file)
  assert_is_valid_sumexp(x)
# NOT VALID
  rownames(SummarizedExperiment::colData(x)) <- NULL
  # assert_is_valid_sumexp(x)
```

---

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| AUTONOMICS_DATASETS | <i>Data used in examples/vignette/tests/longtests</i> |
|---------------------|-------------------------------------------------------|

---

**Description**

Data used in examples/vignette/tests/longtests

**Usage**

AUTONOMICS\_DATASETS

**Format**

An object of class character of length 19.

**Examples**

AUTONOMICS\_DATASETS

---

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| awblinmod | <i>General Linear Modeling (across-within-between interface)</i> |
|-----------|------------------------------------------------------------------|

---

**Description**

General Linear Modeling (across-within-between interface)

**Usage**

```

awblinmod(
  object,
  engine,
  modelvars,
  across = TRUE,
  within = if (length(modelvars) == 1) FALSE else TRUE,
  between = if (length(modelvars) == 1) FALSE else TRUE,
  coding = c("code_control", "code_diff"),
  drop = TRUE,
  verbose = TRUE,
  ...
)

awblinmod_limma(object, ...)

awblinmod_lm(object, ...)

awblinmod_lme(object, ...)

awblinmod_lmer(object, ...)

```

**Arguments**

|           |                                               |
|-----------|-----------------------------------------------|
| object    | SummarizedExperiment                          |
| engine    | 'limma', 'lm', 'lme', or 'lmer'               |
| modelvars | svars                                         |
| across    | TRUE/FALSE: fit across model (additive) ?     |
| within    | TRUE/FALSE: fit within model (nested) ?       |
| between   | TRUE/FALSE: fit between model (interaction) ? |
| coding    | character: codingfunname                      |
| drop      | TRUE or FALSE                                 |
| verbose   | TRUE or FALSE                                 |
| ...       | passed to linmod                              |

**Examples**

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
svars(object)
awblinmod_limma(object, modelvars = c('Diabetes', 'Time'), block = 'Subject')

|--------------------|---------------------------------|
| biplot_corrections | <i>Biplot batch corrections</i> |
|--------------------|---------------------------------|

---

**Description**

Biplot batch corrections

**Usage**

```
biplot_corrections(
  object,
  method = "pca",
  by = "sample_id",
  color = "subgroup",
  covariates = character(0),
  varcols = ceiling(sqrt(1 + length(covariates))),
  plot = TRUE
)
```

**Arguments**

|            |                                   |
|------------|-----------------------------------|
| object     | SummarizedExperiment              |
| method     | 'pca', 'pls', 'lda', or 'sma'     |
| by         | svar                              |
| color      | variable mapped to color (symbol) |
| covariates | covariates to be batch-corrected  |
| varcols    | number of covariate columns       |
| plot       | TRUE/FALSE: plot?                 |

**Value**

grid object

**See Also**

biplot\_covariates

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, pca = TRUE, plot = FALSE)
biplot_corrections(object, color = 'subgroup', covariates = c('Sex', 'Diabetes', 'Subject', 'Time'))
```

|-------------|--------------------|
| block2limma | <i>block2limma</i> |
|-------------|--------------------|

---

Description

block2limma

Usage

```
block2limma(block, ...)

## S3 method for class '`NULL`'
block2limma(block, ...)

## S3 method for class 'character'
block2limma(block, ...)
```

```
## S3 method for class 'list'
block2limma(block, ...)

## S3 method for class 'formula'
block2limma(block, ...)
```

**Arguments**

block                    block: charactervector or formula  
...                      required for s3 dispatch

**Examples**

```
block2limma( block = c(        'subject',        'batch'        ))
block2limma( block = c(`1`= 'subject',        `1`= 'batch'        ))
block2limma( block = list(    subject = ~1,        batch = ~1 ))
block2limma( block =        ~(1|subject)        + (1|batch)    )
```

### Details

A General Linear Model contains:

- \* An Intercept Coefficient: expressing some form of sample average
- \* For each numeric variable: a slope coefficient
- \* For each k-leveled factor: (k-1) Contrast Coefficients.

The interpretation of (intercept and contrast) coefficients depends on the contrast coding function used. Several contrast coding functions are available in 'stats' and 'codingMatrices'. But their (function and coefficient) namings are a bit confusing and unsystematic. Instead, the functions below offer an intuitive interface (to the otherwise powerful stats/codingMatrices packages). The names of these functions reflect the contrast coding used (treatment, backward, sum, or helmert contrasts). They also reflect the intercept interpretation (either first factor's first level or grand mean). They all produce intuitive coefficient names (e.g. 't1-t0' rather than just 't1'). They all have unit scaling (a coefficient of 1 means a backward of 1).

## Value

(explicitly coded) factor vector

## Examples

```
# Coding functions
x <- factor(paste0('t', 0:3))
xlevels <- levels(x)
contr.treatment(      xlevels)
contr.treatment.explicit(xlevels)
contr.diff(           xlevels)
code_control(         xlevels)
code_diff(            xlevels)
code_diff_forward(    xlevels)
code_deviation(       xlevels)
code_deviation_first( xlevels)
code_helmert(         xlevels)
code_helmert_forward( xlevels)

# Code
x %<>% code('contr.treatment')
x %<>% code('contr.treatment.explicit')
x %<>% code('contr.diff')
x %<>% code('code_control')
x %<>% code('code_diff')
x %<>% code('code_diff_forward')
x %<>% code('code_deviation')
x %<>% code('code_deviation_first')
x %<>% code('code_helmert')
x %<>% code('code_helmert_forward')

# Model
file <- system.file('extdata/atkin.metabolon.xls', package = 'autonomics')
object <- read_metabolon(file)
object %<>% linmod_limma(coding = 'contr.treatment') # default
object %<>% linmod_limma(coding = 'contr.treatment.explicit')
object %<>% linmod_limma(coding = 'contr.diff')
object %<>% linmod_limma(coding = 'code_control')
object %<>% linmod_limma(coding = 'code_diff')
object %<>% linmod_limma(coding = 'code_diff_forward')
object %<>% linmod_limma(coding = 'code_deviation')
object %<>% linmod_limma(coding = 'code_deviation_first')
```

```
object %<>% linmod_limma(coding = 'code_helmert')
object %<>% linmod_limma(coding = 'code_helmert_forward')
```

---

collapsed\_entrezg\_to\_symbol

*Collapsed entrezg to genesymbol*

---

## Description

Collapsed entrezg to genesymbol

## Usage

```
collapsed_entrezg_to_symbol(x, sep, orgdb)
```

## Arguments

|       |                 |
|-------|-----------------|
| x     | charactervector |
| sep   | string          |
| orgdb | OrgDb           |

## Value

character vector

## Examples

```
if (installed('org.Hs.eg.db')){
  x <- c('7448/3818/727', '5034/9601/64374')
  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  collapsed_entrezg_to_symbol(x, sep = '/', orgdb = orgdb)
}
```

---

COMPOUNDDISCOVERER\_PATTERNS

*compound discoverer quantity patterns*

---

## Description

compound discoverer quantity patterns

## Usage

```
COMPOUNDDISCOVERER_PATTERNS
```

**Format**

An object of class character of length 2.

**Examples**

```
COMPOUNDDISCOVERER_PATTERNS
```

---

|            |                       |
|------------|-----------------------|
| contrastdt | <i>Get contrastdt</i> |
|------------|-----------------------|

---

**Description**

Get contrastdt

**Usage**

```
contrastdt(  
  object,  
  fitcoef,  
  annocols = fvars(object) %>% extract(!stri_detect_fixed(., "~")),  
  assays = assayNames(object)[0],  
  verbose = TRUE  
)
```

**Arguments**

|          |                              |
|----------|------------------------------|
| object   | SummarizedExperiment         |
| fitcoef  | e.g. 't2-t1~limma'           |
| annocols | annotation fvars             |
| assays   | subset of assayNames(object) |
| verbose  | TRUE or FALSE                |

**Value**

data.table

**Examples**

```
object <- survobj()  
object %<>% linmod_limma(~sex/age)  
contrastdt(object, fitcoef = 'm:senior-junior~limma')  
contrastdt(object[, 1:2], fitcoef = 'm:senior-junior~limma', assays = SummarizedExperiment::assayNames(object)[1])  
contrastdt(object[, 1:2], fitcoef = 'm:senior-junior~limma', assays = SummarizedExperiment::assayNames(object)[1])
```

|----------------|------------------------|
| contrast_coefs | <i>Get model coefs</i> |
|----------------|------------------------|

---

**Description**

Get model coefs

**Usage**

```
contrast_coefs(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control",
  design = create_design(object, formula = formula, drop = drop, coding = coding, verbose
    = FALSE)
)

model_coefs(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control",
  design = create_design(object, formula = formula, drop = drop, coding = coding, verbose
    = FALSE)
)
```

**Arguments**

|         |                       |
|---------|-----------------------|
| object  | SummarizedExperiment  |
| formula | formula               |
| drop    | TRUE or FALSE         |
| coding  | string: codingfunname |
| design  | design matrix         |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% linmod_limma()
  model_coefs(object)
contrast_coefs(object)
```

---

|------------------------|--------------------------|
| contrast_subgroup_cols | <i>Row/Col contrasts</i> |
|------------------------|--------------------------|

---

**Description**

Row/Col contrasts

**Usage**

```
contrast_subgroup_cols(object, subgroupvar)

contrast_subgroup_rows(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$Time)
subgroup_matrix(object, subgroupvar = 'subgroup')
contrast_subgroup_cols(object, subgroupvar = 'subgroup')
contrast_subgroup_rows(object, subgroupvar = 'subgroup')
```

|        |                       |
|--------|-----------------------|
| counts | <i>Get/Set counts</i> |
|--------|-----------------------|

---

**Description**

Get / Set counts matrix

**Usage**

```

counts(object)

## S4 method for signature 'SummarizedExperiment'
counts(object)

counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
counts(object) <- value

```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | count matrix (features x samples) |

**Value**

count matrix (get) or updated object (set)

**Examples**

```

file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts(object) <- values(object)

```

---

counts2cpm

---

*Convert between counts and cpm/tpm*

---

**Description**

Convert between counts and cpm/tpm

**Usage**

```

counts2cpm(x, libsize = scaledlibsizes(x))

cpm2counts(x, libsize)

```

Arguments

x                      count/cpm matrix  
libsize                (scaled) libsize vector

Value

cpm/tpm/count matrix

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
libsize <- scaledlibsizes(counts(object))
tpm <- counts2tpm(counts(object), genesize = 1)
cpm <- counts2cpm(counts(object), libsize)
counts <- cpm2counts(cpm, libsize)
sum(counts(object) - counts)
```

---

|            |                      |
|------------|----------------------|
| counts2tpm | <i>counts to tpm</i> |
|------------|----------------------|

---

Description

counts to tpm

Usage

```
counts2tpm(x, genesize)
```

Arguments

x                      count matrix  
genesize               genesize vector (kilobase)

Value

tpm matrix

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts2tpm(counts(object), genesize = 1)[1:3, 1:3]
```

---

|          |                                               |
|----------|-----------------------------------------------|
| count_in | <i>Count/Collapse in/outside intersection</i> |
|----------|-----------------------------------------------|

---

**Description**

Count/Collapse in/outside intersection

**Usage**

```
count_in(x, ...)

## S3 method for class 'character'
count_in(x, y, ...)

## S3 method for class 'factor'
count_in(x, y, ...)

## S3 method for class 'list'
count_in(x, y, ...)

collapse_in(x, ...)

## S3 method for class 'character'
collapse_in(x, y, sep, ...)

## S3 method for class 'factor'
collapse_in(x, y, sep, ...)

## S3 method for class 'list'
collapse_in(x, y, sep, ...)

count_out(x, ...)

## S3 method for class 'character'
count_out(x, y, ...)

## S3 method for class 'factor'
count_out(x, y, ...)

## S3 method for class 'list'
count_out(x, y, ...)
```

**Arguments**

|     |                      |
|-----|----------------------|
| x   | character OR list    |
| ... | used for S3 dispatch |

y                    character  
 sep                  string

### Value

number OR numeric

### Examples

```
# Sets
contrast1 <- c('a', 'b', 'c', 'd')
pathway <- c('c', 'd', 'e', 'f')
contrast2 <- c('e', 'f', 'g', 'h')

# Count outside
count_out(contrast1, pathway)
count_out(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Count inside
count_in(contrast1, pathway)
count_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Collapse inside
collapse_in(contrast1, pathway, sep = ' ')
collapse_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway, sep = ' ')
```

---

cpm

*Get/Set cpm*

---

### Description

Get / Set cpm matrix

### Usage

```
cpm(object)

## S4 method for signature 'SummarizedExperiment'
cpm(object)

cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
cpm(object) <- value
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | cpm matrix (features x samples) |

**Value**

cpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
cpm(object)[1:3, 1:3]
cpm(object) <- values(object)
```

---

|               |                             |
|---------------|-----------------------------|
| create_design | <i>Create design matrix</i> |
|---------------|-----------------------------|

---

**Description**

Create design matrix for statistical analysis

**Usage**

```
create_design(object, ...)

## S3 method for class 'SummarizedExperiment'
create_design(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control",
  verbose = TRUE,
  ...
)

## S3 method for class 'data.table'
create_design(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control",
  verbose = TRUE,
  ...
)
```

Arguments

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|---------|-----------------------------------------|
| DATADIR | <i>Download autonomics example data</i> |
|---------|-----------------------------------------|

---

Description

Download autonomics example data

**Usage**

DATADIR

```
download_data(
  filename = NULL,
  localdir = file.path(DATADIR, split_extract_fixed(filename, ".", 1)),
  verbose = TRUE,
  force = FALSE
)
```

**Arguments**

|          |                               |               |                          |
|----------|-------------------------------|---------------|--------------------------|
| filename | file name                     |               |                          |
|          | 'atkin.somascan.adat'         | Halama, 2018  | effects of hypoglycemia  |
|          | 'atkin.metabolon.xlsx'        |               |                          |
|          | 'billing16.bam.zip'           | Billing, 2016 | stemcell comparison      |
|          | 'billing16.rnaccounts.txt'    |               |                          |
|          | 'billing16.somascan.adat'     |               |                          |
|          | 'billing16.proteingroups.txt' |               |                          |
|          | 'billing19.rnaccounts.txt'    | Billing, 2016 | stemcell differentiation |
|          | 'billing19.proteingroups.txt' |               |                          |
|          | 'billing19.phosphosites.txt'  |               |                          |

**Usage**

DIMREDUN

DIMREDSUPER

DIMREDENGINES

**Format**

An object of class character of length 2.

An object of class character of length 4.

An object of class character of length 6.

**Details**

- DIMREDUN: c('pca', 'sma')
- DIMREDSUPER: c('lda', 'pls', 'opls', 'spls')
- DIMREDENGINES: c('pca', 'sma', 'lda', 'pls', 'opls', 'spls')

---

 download\_gtf

*Download GTF file*

---

**Description**

Download GTF file with feature annotations

**Usage**

```
download_gtf(
  organism,
  release = 100,
  gtffile = sprintf("%s/gtf/%s", R_user_dir("autonomics", "cache"),
    basename(make_gtf_url(organism, release) %>% substr(1, nchar(.) - 3)))
)
```

**Arguments**

|          |                                                       |
|----------|-------------------------------------------------------|
| organism | 'Homo sapiens', 'Mus musculus' or 'Rattus norvegicus' |
| release  | GTF release (number)                                  |
| gtffile  | string: path to local GTF file                        |

**Value**

gtffile path

**Examples**

```
organism <- 'Homo sapiens'
# download_gtf(organism)
```

---

|                    |                                |
|--------------------|--------------------------------|
| download_mcclain21 | <i>Download mcclain21 data</i> |
|--------------------|--------------------------------|

---

**Description**

Download mcclain21 data

**Usage**

```
download_mcclain21(
  counts_or_samples = "counts",
  localdir = file.path(DATADIR, "mcclain21"),
  force = FALSE
)
```

**Arguments**

|                   |                       |
|-------------------|-----------------------|
| counts_or_samples | 'counts' or 'samples' |
| localdir          | dirname               |
| force             | TRUE or FALSE         |

**Details**

**Mc clain 2021: COVID19 transcriptomics:**

**Examples**

```
download_mcclain21('counts')
download_mcclain21('samples')
```

---

|        |                                 |
|--------|---------------------------------|
| dt2mat | <i>'data.table' to 'matrix'</i> |
|--------|---------------------------------|

---

**Description**

Convert between 'data.table' and 'matrix'

**Usage**

```
dt2mat(x)

mat2dt(x, idvar)
```

**Arguments**

x                    data.table / matrix  
idvar                idvar string

**Value**

matrix / data.table

**Examples**

```
x <- data.table::data.table(
  gene   = c('ENSG001', 'ENSG002', 'ENSG003'),
  sampleA = c(1787, 10, 432),
  sampleB = c(1143, 3, 268))
dt2mat(x)
mat2dt(dt2mat(x), 'gene')
```

---

|            |                            |
|------------|----------------------------|
| enrichment | <i>Enrichment analysis</i> |
|------------|----------------------------|

---

**Description**

Are selected genes enriched in pathway?

**Usage**

```
enrichment(
  object,
  pathwaydt,
  fit = fits(object)[1],
  coef = coefs(object, fit = fit)[1],
  var = abstractvar(object, fit = fit, coef = coef),
```

```

levels = fdt(object)[[var]] %>% base::levels() %>% extract(-1),
genevar = "gene",
genesep = "[ ,;]",
n = 3,
verbose = TRUE,
genes = FALSE
)

```

## Arguments

|           |                         |
|-----------|-------------------------|
| object    | SummarizedExperiment    |
| pathwaydt | pathway data.table      |
| fit       | string                  |
| coef      | string                  |
| var       | selection fvar          |
| levels    | selection levels        |
| genevar   | gene fvar               |
| genesep   | gene separator (string) |
| n         | number                  |
| verbose   | whether to msg          |
| genes     | whether to report genes |

## Details

Four enrichment analyses per geneset using the Fisher Exact Test (see four pvalues). Results are returned in a data.table

|                 |                                                                                                |

|                   |                              |
|-------------------|------------------------------|
| entrezg_to_symbol | <i>Entrezg to genesymbol</i> |
|-------------------|------------------------------|

---

**Description**

Entrezg to genesymbol

**Usage**

```
entrezg_to_symbol(x, orgdb)
```

**Arguments**

|       |                 |
|-------|-----------------|
| x     | charactervector |
| orgdb | OrgDb           |

**Value**

character vector

**Examples**

```
if (installed('org.Hs.eg.db')){
  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  entrezg_to_symbol(x = c('7448', '3818', '727'), orgdb)
}
```

---

|                   |                                                                 |
|-------------------|-----------------------------------------------------------------|
| extract_rectangle | <i>Extract rectangle from omics file, data.table, or matrix</i> |
|-------------------|-----------------------------------------------------------------|

---

**Description**

Extract rectangle from omics file, data.table, or matrix

**Usage**

```
extract_rectangle(x, ...)

## S3 method for class 'character'
extract_rectangle(
  x,
  rows = seq_len(nrows(x, sheet = sheet)),
  cols = seq_len(ncols(x, sheet = sheet)),
  verbose = FALSE,
  transpose = FALSE,
  drop = FALSE,
```

```

    sheet = 1,
    ...
)

## S3 method for class 'data.table'
extract_rectangle(
  x,
  rows = seq_len(nrow(x)),
  cols = seq_len(ncol(x)),
  transpose = FALSE,
  drop = FALSE,
  ...
)

## S3 method for class 'matrix'
extract_rectangle(
  x,
  rows = seq_len(nrow(x)),
  cols = seq_len(ncol(x)),
  transpose = FALSE,
  drop = FALSE,
  ...
)

```

### Arguments

|           |                              |
|-----------|------------------------------|
| x         | omics datafile or datatable  |
| ...       | allow for S3 method dispatch |
| rows      | numeric vector               |
| cols      | numeric vector               |
| verbose   | logical                      |
| transpose | logical                      |
| drop      | logical                      |
| sheet     | numeric or string            |

### Value

matrix

### Examples

```

# FROM FILE: extract_rectangle.character

```

fcluster

*Cluster features***Description**

Cluster features

**Usage**

```

fcluster(
  object,
  distmat = NULL,
  method = "cmeans",
  k = 2:10,
  verbose = TRUE,
  plot = TRUE,
  label = if ("gene" %in% fvars(object)) "gene" else "feature_id",
  alpha = 1,
  nrow = if (length(method) > 1) length(method) else NULL,
  ncol = NULL
)

```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| distmat | distance matrix      |
| method  | 'cmeans'             |
| k       | number of clusters   |
| verbose | TRUE or FALSE        |
| plot    | TRUE or FALSE        |
| label   | fvar                 |
| alpha   | fraction             |
| nrow    | number               |
| ncol    | number               |

**Value**

SummarizedExperiment  
SummarizedExperiment

**Examples**

```
object <- twofactor_sumexp()
distmat <- fdist(object)
fcluster(object) # membership-based colors
fcluster(object, distmat) # silhouette-based colors
fcluster(object, distmat, method = c('cmeans', 'hclust', 'pamk')) # more methods
```

fdt(object)[[pcol]] %>% p.adjust(method = 'fdr') %>% fdr2p()

```

---

`filter_exprs_replicated_in_some_subgroup`*Filter features with replicated expression in some subgroup*

---

## Description

Filter features with replicated expression in some subgroup

## Usage

```
filter_exprs_replicated_in_some_subgroup(  
  object,  
  subgroupvar = "subgroup",  
  assay = assayNames(object)[1],  
  comparator = if (contains_ratios(object)) "!=" else ">",  
  lod = 0,  
  nsample = 2,  
  nsubgroup = 1,  
  verbose = TRUE  
)
```

## Arguments

|                          |                            |
|--------------------------|----------------------------|
| <code>object</code>      | SummarizedExperiment       |
| <code>subgroupvar</code> | subgroup svar              |
| <code>assay</code>       | string                     |
| <code>comparator</code>  | '>' or '!='                |
| <code>lod</code>         | number: limit of detection |
| <code>nsample</code>     | number                     |
| <code>nsubgroup</code>   | number                     |
| <code>verbose</code>     | TRUE or FALSE              |

## Value

Filtered SummarizedExperiment

## Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
object %<>% filter_exprs_replicated_in_some_subgroup()  
filter_exprs_replicated_in_some_subgroup(object, character(0))  
filter_exprs_replicated_in_some_subgroup(object, NULL)
```

---

|                 |                                     |

|-------------|------------------------|
| fix_xlgenes | <i>Fix excel genes</i> |
|-------------|------------------------|

---

Description

Fix excel genes

Usage

```
fix_xlgenes(x)
```

Arguments

x                      character

Value

character

Examples

```
x <- c('FAM46B', '15-Sep', '2-Mar', 'MARCHF6')
x
fix_xlgenes(x)
```

---

|         |                        |
|---------|------------------------|
| flevels | <i>Get fvar levels</i> |
|---------|------------------------|

---

Description

Get fvar levels

Usage

```
flevels(object, fvar)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| fvar   | feature variable     |

**Value**

fvar values

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(flevels(object, 'feature_id'))
```

---

fnames

*Get/Set fnames*

---

**Description**

Get/Set feature names

**Usage**

```
fnames(object)

## S4 method for signature 'SummarizedExperiment'
fnames(object)

fnames(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
fnames(object) <- value
```

**Arguments**

|        |                                      |
|--------|--------------------------------------|
| object | SummarizedExperiment, eSet, or EList |
| value  | character vector with feature names  |

**Value**

feature name vector (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fnames(object) %<>% paste0('protein_', .)
object
```

---

|-------|---------------------|

---

**Description**

Feature type

**Usage**

```
ftype(  
  object,  
  formula = default_formula(object),  
  drop = varlevels_dont_clash(object, all.vars(formula)),  
  fit = fits(object)[1],  
  coding = "code_control"  
)
```

**Arguments**

|         |                                  |
|---------|----------------------------------|
| object  | SummarizedExperiment             |
| formula | model formula                    |
| drop    | TRUE or FALSE                    |
| fit     | 'limma', 'lm', 'lme', 'wilcoxon' |
| coding  | coding function                  |

**Value**

SummarizedExperiment

**Examples**

```
file <- download_data('atkin.metabolon.xlsx')
object <- read_metabolon(file)
object %<>% linmod_limma(block = 'Subject', coefs = model_coefs(object)) # model_coefs !
object %<>% ftype() # model_coefs not contrast_coefs !
fdt(object) # because intercept is required to recreate predictions
```

---

|         |                    |
|---------|--------------------|
| fvalues | <i>Get fvalues</i> |
|---------|--------------------|

---

**Description**

Get fvar values

**Usage**

```
fvalues(object, fvar)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| fvar   | feature variable     |

**Value**

fvar values

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(fvalues(object, 'feature_id'))
fvalues(object, NULL)
```

---

|       |                      |
|-------|----------------------|
| fvars | <i>Get/Set fvars</i> |
|-------|----------------------|

---

**Description**

Get/Set feature variables

**Usage**

```
fvars(object)

## S4 method for signature 'SummarizedExperiment'
fvars(object)

fvars(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
fvars(object) <- value
```

**Arguments**

|        |                                         |
|--------|-----------------------------------------|
| object | SummarizedExperiment                    |
| value  | character vector with feature variables |

**Value**

feature variables vector (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fvars(object)[1] %<>% paste0('1')
fvars(object)[1]
```

---

|                 |                                |
|-----------------|--------------------------------|
| genome_to_orgdb | <i>Get corresponding orgdb</i> |
|-----------------|--------------------------------|

---

**Description**

Get corresponding orgdb

**Usage**

```
genome_to_orgdb(genome)
```

**Arguments**

genome                    'hg38', 'hg19', 'mm10', or 'mm9'

**Value**

OrgDb

**Examples**

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  class(genome_to_orgdb('hg38'))
}
```

---

|                |                       |
|----------------|-----------------------|
| group_by_level | <i>group by level</i> |
|----------------|-----------------------|

---

**Description**

group by level

**Usage**

```
group_by_level(x, ...)

## S3 method for class 'character'
group_by_level(x, ...)

## S3 method for class 'factor'
group_by_level(x, ...)

## S3 method for class 'data.table'
group_by_level(x, var, idvar, ...)
```

**Arguments**

x                    named logical/character/factor

...                S3 dispatch

var                string

idvar             string

**Value**

unnamed character

**Examples**

```
t1 <- c( KLF5 = 'up', F11 = 'up', RIG = 'flat', ABT1 = 'down')
dt <- data.table( gene = c( 'KL5', 'F11', 'RIG', 'ABT1' ),
                  t1 = c( 'up', 'up', 'flat', 'down' ) )
group_by_level(t1)           # character
group_by_level(factor(t1))   # factor
group_by_level(dt, 't1', 'gene') # data.table
```

---

```
guess_compounddiscoverer_quantity
```

*Guess compound discoverer quantity from snames*

---

**Description**

Guess compound discoverer quantity from snames

**Usage**

```
guess_compounddiscoverer_quantity(x)
```

**Arguments**

x                      character vector

**Value**

string: value from names(COMPOUNDDISCOVERER\_PATTERNS)

**Examples**

```
## Not run:
# file
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
guess_compounddiscoverer_quantity(file)

## End(Not run)

# character vector
x <- "Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)

x <- "Norm. Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)
```

|--------------|---------------------|

---

**Description**

guess\_fitsep

**Usage**

```
guess_fitsep(object, ...)

## S3 method for class 'data.table'
guess_fitsep(object, ...)

## S3 method for class 'SummarizedExperiment'
guess_fitsep(object, ...)
```

**Arguments**

|        |                                    |
|--------|------------------------------------|
| object | data.table or SummarizedExperiment |
| ...    | S3 dispatch                        |

**Value**

string

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% linmod_limma()
guess_fitsep(object)
```

---

|                         |                                            |
|-------------------------|--------------------------------------------|
| guess_maxquant_quantity | <i>Guess maxquant quantity from snames</i> |
|-------------------------|--------------------------------------------|

---

**Description**

Guess maxquant quantity from snames

**Usage**

```
guess_maxquant_quantity(x)
```

**Arguments**

x                      character vector

**Value**

string: value from names(MAXQUANT\_PATTERNS)

**Examples**

```
# file
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
guess_maxquant_quantity(file)

# character vector
x <- "Ratio M/L normalized STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "Ratio M/L STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "LFQ intensity E00.R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity corrected 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Intensity H STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)
```

---

guess\_sep

*Guess separator*

---

**Description**

Guess separator

**Usage**

```
guess_sep(x, ...)
```

## S3 method for class 'numeric'

```
guess_sep(x, ...)
```

## S3 method for class 'character'

```
guess_sep(x, separators = c(".", "_"), verbose = FALSE, ...)
```

```
## S3 method for class 'factor'
guess_sep(x, ...)

## S3 method for class 'SummarizedExperiment'
guess_sep(x, var = "sample_id", separators = c(".", "_"), verbose = FALSE, ...)
```

### Arguments

|                         |                                                   |
|-------------------------|---------------------------------------------------|
| <code>x</code>          | character vector or SummarizedExperiment          |
| <code>...</code>        | used for proper S3 method dispatch                |
| <code>separators</code> | character vector: possible separators to look for |
| <code>verbose</code>    | TRUE or FALSE                                     |
| <code>var</code>        | svar or fvar                                      |

### Value

separator (string) or NULL (if no separator could be identified)

### Examples

```
# character vector
guess_sep(c('PERM_NON.R1[H/L]', 'PERM_NON.R2[H/L]'))
guess_sep(c('WT_untreated_1', 'WT_untreated_2'))
guess_sep(c('group1', 'group2.R1'))
# SummarizedExperiment
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
guess_sep(object)
```

---

|                     |                                      |
|---------------------|--------------------------------------|
| has_multiple_levels | <i>Variable has multiple levels?</i> |
|---------------------|--------------------------------------|

---

### Description

Variable has multiple levels?

### Usage

```
has_multiple_levels(x, ...)

## S3 method for class 'character'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)

## S3 method for class 'factor'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)
```

```
## S3 method for class 'numeric'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)

## S3 method for class 'data.table'
has_multiple_levels(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y),
  ...
)

## S3 method for class 'SummarizedExperiment'
has_multiple_levels(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y),
  ...
)
```

### Arguments

|        |                                            |
|--------|--------------------------------------------|
| x      | vector, data.table or SummarizedExperiment |
| ...    | required for s3 dispatch                   |
| .xname | string                                     |
| y      | string                                     |
| .yname | string                                     |

### Value

TRUE or false

### Examples

```
# numeric
a <- numeric(); has_multiple_levels(a)
a <- c(1, 1); has_multiple_levels(a)
a <- c(1, 2); has_multiple_levels(a)

# character
a <- character(); has_multiple_levels(a)
a <- c('A', 'A'); has_multiple_levels(a)
a <- c('A', 'B'); has_multiple_levels(a)

# factor
a <- factor(); has_multiple_levels(a)
a <- factor(c('A', 'A')); has_multiple_levels(a)
a <- factor(c('A', 'B')); has_multiple_levels(a)

# data.table
dt <- data.table(a = factor()); has_multiple_levels(dt, 'b')
```

```
dt <- data.table(a = factor());          has_multiple_levels(dt, 'a')
dt <- data.table(a = factor());          has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'A'))); has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'B'))); has_multiple_levels(dt, 'a')
# sumexp
object <- matrix(1:9, nrow = 3)

|-------------|-----------------------------------|
| hdlproteins | <i>hdl proteomewatch proteins</i> |
|-------------|-----------------------------------|

---

**Description**

hdl proteomewatch proteins

**Usage**

hdlproteins()

**Value**

string vector: HDLProteomeWatch protein entries

**Examples**

hdlproteins()

---

|        |               |
|--------|---------------|
| impute | <i>Impute</i> |
|--------|---------------|

---

**Description**

Impute NA values

**Usage**

```

impute(object, ...)

## S3 method for class 'numeric'
impute(object, shift = 2.5, width = 0.3, verbose = TRUE, plot = FALSE, ...)

## S3 method for class 'matrix'
impute(
  object,
  shift = 2.5,
  width = 0.3,
  verbose = TRUE,
  plot = FALSE,
  n = min(9, ncol(object)),
  palette = make_colors(colnames(object)),
  ...
)

## S3 method for class 'SummarizedExperiment'
impute(
  object,
  assay = assayNames(object)[1],
  by = "subgroup",
  shift = 2.5,
  width = 0.3,
  frac = 0.5,
  verbose = TRUE,
  plot = FALSE,
  palette = make_colors(colnames(object)),
  n = min(9, ncol(object)),
  ...
)

```

**Arguments**

|                      |                           |
|----------------------|---------------------------|
| <code>object</code>  | numeric vector, SumExp    |
| <code>...</code>     | required for s3 dispatch  |
| <code>shift</code>   | number: sd units          |
| <code>width</code>   | number: sd units          |
| <code>verbose</code> | TRUE or FALSE             |
| <code>plot</code>    | TRUE or FALSE             |
| <code>n</code>       | number of samples to plot |
| <code>palette</code> | color vector              |
| <code>assay</code>   | string                    |
| <code>by</code>      | svar                      |

frac                    fraction: fraction of available samples should be greater than this value for a subgroup to be called available

**Details**

Imputes NA values from N(mean - 2.5 sd, 0.3 sd)

**Value**

numeric vector, matrix or SumExp

**Examples**

```
# Simple Design
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
impute(values(object)[, 1], plot = TRUE)[1:3]                    # vector
impute(values(object),        plot = TRUE)[1:3, 1:3]            # matrix
impute(object, plot = TRUE)                                      # sumexp

# Complex Design
subgroups <- sprintf('%s_STD', c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'))
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
impute(values(object)[1:3, 1    ])            # vector
impute(values(object)[1:3, 1:5 ])            # matrix
impute( object )                              # sumexp
```

---

|           |                              |
|-----------|------------------------------|
| installed | <i>Is package installed?</i> |
|-----------|------------------------------|

---

**Description**

Is package installed?

**Usage**

installed(pkg)

**Arguments**

pkg                    package (string)

**Value**

TRUE or FALSE

---

|                  |                         |
|------------------|-------------------------|
| invert_subgroups | <i>Invert subgroups</i> |
|------------------|-------------------------|

---

**Description**

Invert expressions , subgroups, and sample ids

**Usage**

```
invert_subgroups(  
  object,  
  subgroups = slevels(object, "subgroup"),  
  sep = guess_sep(object, "subgroup")  
)
```

**Arguments**

|           |                                                  |
|-----------|--------------------------------------------------|
| object    | SummarizedExperiment                             |
| subgroups | character vector: subgroup levels to be inversed |
| sep       | string: collapsed string separator               |

**Value**

character vector or SummarizedExperiment

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_proteingroups(file)  
invert_subgroups(object)
```

---

|---------------------|----------------------------|
| is_collapsed_subset | <i>Is collapsed subset</i> |
|---------------------|----------------------------|

---

**Description**

Is collapsed subset

**Usage**

```
is_collapsed_subset(x, y, sep = ";")
```

**Arguments**

|     |                  |
|-----|------------------|
| x   | character vector |
| y   | character vector |
| sep | string           |

**Value**

character vector

**Examples**

```
x <- c('H3BNX8;H3BRM5', 'G5E9Y3')
y <- c('P20674;H3BNX8;H3BV69;H3BRM5', 'G5E9Y3;Q8WWN8;B4DIT1')
is_collapsed_subset(x, y)
```

---

`is_compounddiscoverer_output`*Is compounddiscoverer output?*

---

## Description

Is compounddiscoverer output?

## Usage

```
is_compounddiscoverer_output(x, .xname = get_name_in_parent(x))
```

## Arguments

|                     |                        |
|---------------------|------------------------|
| <code>x</code>      | <code>file</code>      |
| <code>.xname</code> | name of <code>x</code> |

## Examples

```
file <- NULL;                                     is_compounddiscoverer_output(file)
file <- 3;                                         is_compounddiscoverer_output(file)
file <- 'blabla.tsv';                             is_compounddiscoverer_output(file)

file <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics'); is_compounddiscoverer_output(file)
```

---

`is_correlation_matrix` *Assert correlation matrix*

---

## Description

Assert correlation matrix

## Usage

```
is_correlation_matrix(
  x,
  .xname = get_name_in_parent(x),
  severity = getOption("assertive.severity", "stop")
)

assert_correlation_matrix(x, .xname = get_name_in_parent(x))
```

**Arguments**

|          |                     |
|----------|---------------------|
| x        | correlation matrix  |
| .xname   | string              |
| severity | 'warning' or 'stop' |

**Value**

TRUE or false

**Examples**

```
x <- matrix(c(1,0.7, 0.3, 1), nrow = 2)
rownames(x) <- c('gene1', 'gene2')
colnames(x) <- c('gene1', 'gene2')
is_correlation_matrix(x)
is_correlation_matrix({x[1,1] <- -2; x})
```

---

|                 |                          |
|-----------------|--------------------------|
| is_diann_report | <i>Is diann report ?</i> |
|-----------------|--------------------------|

---

**Description**

Is diann report ?

**Usage**

```
is_diann_report(x, .xname = get_name_in_parent(x))

assert_diann_report(x, .xname = get_name_in_parent(x))

assert_fragpipe_tsv(x, .xname = get_name_in_parent(x))

assert_maxquant_proteingroups(x, .xname = get_name_in_parent(x))

assert_maxquant_phosphosites(x, .xname = get_name_in_parent(x))

assert_compounddiscoverer_output(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

Examples

```
file <- NULL;                                     is_diann_report(file)
file <- 3;                                       is_diann_report(file)
file <- 'blabla.tsv';                         is_diann_report(file)
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics'); is_diann_report(file)

file <- download_data('multiorganism.combined_protein.tsv');           is_diann_report(file)
file <- download_data('dilution.report.tsv');           is_diann_report(file)
```

---

|            |                   |
|------------|-------------------|
| is_fastadt | <i>Is fastadt</i> |
|------------|-------------------|

---

Description

Is fastadt

Usage

```
is_fastadt(x, .xname = get_name_in_parent(x))

assert_fastadt(x, .xname = get_name_in_parent(x))
```

Arguments

|        |                  |
|--------|------------------|
| x      | fasta data.table |
| .xname | string           |

Examples

```
fastafile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
x <- read_uniprotDT(fastafile)
# is_fastadt(x) # slow
```

---

|         |                   |
|---------|-------------------|
| is_file | <i>Is a file?</i> |
|---------|-------------------|

---

Description

Is a file (and not a dir)

Usage

```
is_file(file)
```

Arguments

|      |          |
|------|----------|
| file | filepath |
|------|----------|

**Details**

This function distinguishes between dir and file. Others dont: is.file, fs::file\_exists, assertive::is\_existing\_file

**Examples**

```
dir <- tempdir(); dir.create(dir, showWarnings = FALSE)
file <- tempfile(); invisible(file.create(file))
is_file(dir)
is_file(file)
```

---

|             |                    |
|-------------|--------------------|
| is_fraction | <i>Is fraction</i> |
|-------------|--------------------|

---

**Description**

Is fraction

**Usage**

```
is_fraction(x, .xname = get_name_in_parent(x))

assert_is_fraction(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |        |
|--------|--------|
| x      | number |
| .xname | string |

**Value**

TRUE or false

**Examples**

```
is_fraction(0.1)      # YES
is_fraction(1)        # YES
is_fraction(1.2)      # NO - more than 1
is_fraction(c(0.1, 0.2)) # NO - vector
```

---

|                 |                          |
|-----------------|--------------------------|
| is_fragpipe_tsv | <i>Is fragpipe file?</i> |
|-----------------|--------------------------|

---

**Description**

Is fragpipe file?

**Usage**

```
is_fragpipe_tsv(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

**Examples**

```
file <- NULL;                                is_fragpipe_tsv(file)
file <- 3;                                    is_fragpipe_tsv(file)
file <- 'blabla.tsv';                        is_fragpipe_tsv(file)
file <- download_data('dilution.report.tsv'); is_fragpipe_tsv(file)
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics'); is_fragpipe_tsv(file)
file <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics'); is_fragpipe_tsv(file)
file <- download_data('multiorganism.combined_protein.tsv'); is_fragpipe_tsv(file)
```

---

|            |                           |
|------------|---------------------------|
| is_imputed | <i>Get/set is_imputed</i> |
|------------|---------------------------|

---

**Description**

Get/Set is\_imputed

**Usage**

```
is_imputed(object)

## S4 method for signature 'SummarizedExperiment'
is_imputed(object)

is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
is_imputed(object) <- value
```

Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| value  | matrix               |

Value

matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, impute = TRUE)
sum(is_imputed(object))
```

---

|                                       |
|---------------------------------------|
| is_maxquant_phosphosites              |
| <i>Is maxquant phosphosites file?</i> |

---

Description

Is maxquant phosphosites file?

Usage

```
is_maxquant_phosphosites(x, .xname = get_name_in_parent(x))
```

Arguments

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

Examples

```
file <- NULL; is_maxquant_phosphosites(file)
file <- 3; is_maxquant_phosphosites(file)
file <- 'blabla.tsv'; is_maxquant_phosphosites(file)
file <- download_data('dilution.report.tsv'); is_maxquant_phosphosites(file)

file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics'); is_maxquant_phosphosites(file)
file <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics'); is_maxquant_phosphosites(file)
```

---

|                           |                                        |
|---------------------------|----------------------------------------|
| is_maxquant_proteingroups |                                        |
|                           | <i>Is maxquant proteingroups file?</i> |

---

**Description**

Is maxquant proteingroups file?

**Usage**

is\_maxquant\_proteingroups(x, .xname = get\_name\_in\_parent(x))

**Arguments**

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

**Examples**

|                                                                                    |                                 |
|------------------------------------------------------------------------------------|---------------------------------|
| file <- NULL;                                                                      | is_maxquant_proteingroups(file) |
| file <- 3;                                                                         | is_maxquant_proteingroups(file) |

| file <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics'); | is_maxquant_proteingroups(file) |
| file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics'); | is_maxquant_proteingroups(file) |

---

|                |                                        |
|----------------|----------------------------------------|
| is_non_numeric | <i>Are all variables non-numeric ?</i> |
|----------------|----------------------------------------|

---

**Description**

Are all variables non-numeric ?

**Usage**

is\_non\_numeric(x)

all\_non\_numeric(object, formula)

**Arguments**

|         |                      |
|---------|----------------------|
| x       | vector               |
| object  | SummarizedExperiment |
| formula | formula              |

**Value**

TRUE or FALSE

**Examples**

```
all_non_numeric(survobj(), ~ age)
all_non_numeric(survobj(), ~ exprs2levels)
all_non_numeric(survobj(), ~ age/exprs2levels)
all_non_numeric(survobj(), ~ age/exprs)
```

---

|                    |                           |
|--------------------|---------------------------|
| is_positive_number | <i>Is positive number</i> |
|--------------------|---------------------------|

---

**Description**

Is positive number

**Usage**

```
is_positive_number(x, .xname = get_name_in_parent(x))

assert_positive_number(x, .xname = get_name_in_parent(x))

is_weakly_positive_number(x, .xname = get_name_in_parent(x))

assert_weakly_positive_number(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | number    |
| .xname | name of x |

**Value**

TRUE or false

**Examples**

```
is_positive_number( 3)
is_positive_number(-3)
is_positive_number( 0)
is_weakly_positive_number(0)
assert_positive_number(3)
```

---

|                  |                         |
|------------------|-------------------------|
| is_scalar_subset | <i>Is scalar subset</i> |
|------------------|-------------------------|

---

## Description

Is scalar subset

## Usage

```
is_scalar_subset(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y)  
)  
  
assert_scalar_subset(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y)  
)
```

## Arguments

|        |                      |
|--------|----------------------|
| x      | scalar               |
| y      | SummarizedExperiment |
| .xname | name of x            |
| .yname | name of y            |

## Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_proteingroups(file)  
is_scalar_subset('subgroup', svars(object))  
is_scalar_subset('subject', svars(object))  
assert_scalar_subset('subgroup', svars(object))
```

---

|        |                        |
|--------|------------------------|
| is_sig | <i>Is significant?</i> |
|--------|------------------------|

---

**Description**

Is significant?

**Usage**

```
is_sig(  
  object,  
  fit = fits(object)[1],  
  contrast = coefs(object),  
  quantity = "fdr"  
)
```

**Arguments**

|          |                                               |
|----------|-----------------------------------------------|
| object   | SummarizedExperiment                          |
| fit      | subset of autonomics::TESTS                   |
| contrast | subset of colnames(metadata(object)[[fit]])   |
| quantity | value in dimnames(metadata(object)[[fit]])[3] |

**Value**

matrix: -1 (downregulated), +1 (upregulatd), 0 (not fdr significant)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_proteingroups(file)  
object %<>% linmod_lm()  
object %<>% linmod_limma()  
issig <- is_sig(object, fit = c('lm','limma'), contrast = 'Adult-X30dpt')  
plot_contrast_venn(issig)
```

---

|                  |                         |
|------------------|-------------------------|
| is_valid_formula | <i>Is valid formula</i> |
|------------------|-------------------------|

---

**Description**

Is valid formula

**Usage**

```

is_valid_formula(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)

assert_valid_formula(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)

```

**Arguments**

|        |                      |
|--------|----------------------|
| x      | formula              |
| y      | SummarizedExperiment |
| .xname | string               |
| .yname | string               |

**Value**

TRUE or false

**Examples**

```

object <- matrix(1:9, nrow = 3)
rownames(object) <- sprintf('f%d', 1:3)
colnames(object) <- sprintf('s%d', 1:3)
object <- list(exprs = object)
object %<>% SummarizedExperiment::SummarizedExperiment()
object$group <- 'group0'
object$subgroup <- c('A', 'B', 'C')
svars(object)
  is_valid_formula( 'condition', object) # not formula
  is_valid_formula( ~condition, object) # not svar
  is_valid_formula( ~group, object) # not multilevel
  is_valid_formula( ~subgroup, object) # TRUE
  is_valid_formula( ~0+subgroup, object) # TRUE
  is_valid_formula( ~1, object) # TRUE
assert_valid_formula( ~subgroup, object)

```

---

|--------------------------------|
| keep_estimable_features        |
| <i>Keep estimable features</i> |

---

**Description**

Keep estimable features

**Usage**

```
keep_estimable_features(  
  object,  
  formula = ~1,  
  block = NULL,  
  coding = "code_control",  
  verbose = TRUE  
)
```

**Arguments**

|         |                                                             |
|---------|-------------------------------------------------------------|
| object  | SummarizedExperiment                                        |
| formula | model formula                                               |
| block   | blockvar specification as string/character, list or formula |
| coding  | coding function name (string)                               |
| verbose | TRUE or FALSE                                               |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
keep_estimable_features(object, formula = ~ subgroup, block = 'Subject')
```

label2index(x = 'Reporter intensity 1 Mix1')

```

---

left.vars

*Get factor variables*

---

**Description**

Get factor variables

**Usage**

```
left.vars(formula)
```

```
right.vars(formula)
```

```
factor.vars(formula, object)
```

```
## S4 method for signature 'formula,SummarizedExperiment'
factor.vars(formula, object)
```

```
## S4 method for signature 'formula,data.table'
factor.vars(formula, object)
```

**Arguments**

```
formula          formula
```

```
object           SummarizedExperiment or data.table
```

**Value**

character vector

**Examples**

```

object <- survobj()
formula <- survival::Surv(timetoevent, event) ~ age/exprs2levels
  all.vars(formula)
  left.vars(formula)
  right.vars(formula)
  factor.vars(formula, object)

```

|---------------|--------------------------------|
| LINMODENGINES | <i>Linear Modeling Engines</i> |
|---------------|--------------------------------|

---

**Description**

Linear Modeling Engines

**Usage**

LINMODENGINES

**Format**

An object of class character of length 5.

**Examples**

LINMODENGINES

---

|          |                       |
|----------|-----------------------|
| list2mat | <i>list to matrix</i> |
|----------|-----------------------|

---

**Description**

list to matrix

**Usage**

list2mat(x)

**Arguments**

x                      list

**Value**

matrix

**Examples**

```
x <- list(roundfruit = c('apple', 'orange'), redfruit = c('apple', 'strawberry'))
list2mat(x)
```

---

|            |                   |
|------------|-------------------|
| list_files | <i>list_files</i> |
|------------|-------------------|

---

**Description**

list.files for programming

**Usage**

```
list_files(dir, full.names)
```

**Arguments**

|            |               |
|------------|---------------|
| dir        | directory     |
| full.names | TRUE or FALSE |

**Details**

Adds a small layer on list.files. Returning NULL rather than character(0) when no files. Making it better suited for programming.

---

|            |                           |
|------------|---------------------------|
| log2counts | <i>Get/Set log2counts</i> |
|------------|---------------------------|

---

**Description**

Get / Set log2counts matrix

**Usage**

```
log2counts(object)

## S4 method for signature 'SummarizedExperiment'
log2counts(object)

log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2counts(object) <- value
```

Arguments

object            SummarizedExperiment  
value            log2count matrix (features x samples)

Value

log2count matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2counts(object)[1:3, 1:3]
log2counts(object) <- values(object)
```

---

|         |                        |
|---------|------------------------|
| log2cpm | <i>Get/Set log2cpm</i> |
|---------|------------------------|

---

Description

Get / Set log2cpm matrix

Usage

```
log2cpm(object)

## S4 method for signature 'SummarizedExperiment'
log2cpm(object)

log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2cpm(object) <- value
```

Arguments

object            SummarizedExperiment  
value            log2cpm matrix (features x samples)

Value

log2cpm matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2cpm(object)[1:3, 1:3]
log2cpm(object) <- values(object)
```

---

|           |                          |
|-----------|--------------------------|
| log2diffs | <i>Get/Set log2diffs</i> |
|-----------|--------------------------|

---

Description

Get/Set log2diffs

Usage

```
log2diffs(object)

## S4 method for signature 'SummarizedExperiment'
log2diffs(object)

log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2diffs(object) <- value
```

Arguments

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

Value

occupancy matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2diffs(object)[1:3, 1:3]
```

---

|              |                             |
|--------------|-----------------------------|
| log2proteins | <i>Get/Set log2proteins</i> |
|--------------|-----------------------------|

---

**Description**

Get/Set log2proteins

**Usage**

```
log2proteins(object)

## S4 method for signature 'SummarizedExperiment'
log2proteins(object)

log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2proteins(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2proteins(object)[1:3, 1:3]
```

---

|           |                          |
|-----------|--------------------------|
| log2sites | <i>Get/Set log2sites</i> |
|-----------|--------------------------|

---

**Description**

Get/Set log2sites

**Usage**

```
log2sites(object)

## S4 method for signature 'SummarizedExperiment'
log2sites(object)

log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2sites(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2sites(object)[1:3, 1:3]
```

---

log2tpm

*Get/Set log2tpm*

---

**Description**

Get / Set log2tpm matrix

**Usage**

```
log2tpm(object)

## S4 method for signature 'SummarizedExperiment'
log2tpm(object)

log2tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2tpm(object) <- value
```

```
## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2tpm(object) <- value
```

**Arguments**

object                    SummarizedExperiment  
value                    log2tpm matrix (features x samples)

**Value**

log2tpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2tpm(object) <- values(object)
log2tpm(object)[1:3, 1:3]
```

---

|               |                         |
|---------------|-------------------------|
| log2transform | <i>Transform values</i> |
|---------------|-------------------------|

---

**Description**

Transform values

**Usage**

```
log2transform(  
  object,  
  assay = assayNames(object)[1],  
  pseudo = 0,  
  verbose = FALSE  
)  
  
exp2transform(object, assay = assayNames(object)[1], verbose = FALSE)  
  
zscore(object, verbose = FALSE)  
  
sscale(mat, verbose = FALSE)  
  
fscale(mat, verbose = FALSE)  
  
quantnorm(object, verbose = FALSE)  
  
invnorm(object, verbose = FALSE)  
  
vsn(object, delog = TRUE, relog = delog, verbose = FALSE)
```

**Arguments**

|         |                                                               |
|---------|---------------------------------------------------------------|
| object  | SummarizedExperiment                                          |
| assay   | character vector : assays for which to perform transformation |
| pseudo  | number : pseudo value to be added prior to transformation     |
| verbose | TRUE or FALSE : whether to msg                                |
| mat     | matrix                                                        |
| delog   | TRUE or FALSE (vsn)                                           |
| relog   | TRUE or FALSE (vsn)                                           |

**Value**

Transformed sumexp

**Examples**

```

file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)

object                                %>% plot_sample_densities()
invnorm(object)                       %>% plot_sample_densities()

|----------------|--------------------------|
| logical2factor | <i>logical to factor</i> |
|----------------|--------------------------|

---

**Description**

logical to factor

**Usage**

```

logical2factor(x, true = get_name_in_parent(x), false = paste0("not", true))

factor2logical(x)

```

**Arguments**

|       |                     |
|-------|---------------------|
| x     | logical vector      |
| true  | string : truelevel  |
| false | string : falselevel |

**Value**

factor

**Examples**

```
t1up <- c( TRUE,  FALSE,  TRUE)
t1  <- c('flat', 'down', 'up' ) %>% factor(., .)
t1up
logical2factor(t1up)
factor2logical(t1)
```

|---------------|-------------------------------------------------|
| matrix2sumexp | <i>Convert matrix into SummarizedExperiment</i> |
|---------------|-------------------------------------------------|

---

Description

Convert matrix into SummarizedExperiment

Usage

```
matrix2sumexp(x, verbose = TRUE)
```

Arguments

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | TRUE/FALSE |

Value

SummarizedExperiment

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
x <- values(read_metabolon(file))
object <- matrix2sumexp(x)
object %<>% pca()
biplot(object, color = 'subgroup')
```

|-------------------|-----------------------------------|
| MAXQUANT_PATTERNS | <i>maxquant quantity patterns</i> |
|-------------------|-----------------------------------|

---

Description

maxquant quantity patterns

Usage

```
MAXQUANT_PATTERNS
```

**Format**

An object of class character of length 7.

**Examples**

```
MAXQUANT_PATTERNS
```

---

|               |                                |
|---------------|--------------------------------|
| mclust_breaks | <i>Mixture/Quantile breaks</i> |
|---------------|--------------------------------|

---

**Description**

Mixture/Quantile breaks

**Usage**

```
mclust_breaks(x, k = NULL)

mixtools_breaks(x, k = 2)

quantile_breaks(x, k = 3, probs = seq_len(k - 1)/k)
```

**Arguments**

|       |               |
|-------|---------------|
| x     | numeric       |
| k     | number        |
| probs | probabilities |

**Examples**

```
set.seed(1)
x <- c(rnorm(20, 3), rnorm(20,7), rnorm(20, 11))
mclust_breaks(x)
mixtools_breaks(x, k = 3)
quantile_breaks(x)
```

mdsplot

*Feature correlations/distances***Description**

Feature correlations/distances

**Usage**`mdsplot(distmat, title = NULL)``fcor(object, verbose = TRUE)``scor(object, verbose = TRUE)``fdist(object, method = "cor")``sdist(object, method = "cor")`**Arguments**

|                      |                         |
|----------------------|-------------------------|
| <code>distmat</code> | distance matrix         |
| <code>title</code>   | NULL or string          |
| <code>object</code>  | SummarizedExperiment    |
| <code>verbose</code> | TRUE or FALSE           |
| <code>method</code>  | 'cor', 'euclidian', etc |

**Value**

matrix

**Examples**

```
# Correlations
object <- twofactor_sumexp()
scor(object) %>% pheatmap::pheatmap()
fcor(object) %>% pheatmap::pheatmap()

# Distances
sdist(object, 'cor') %>% mdsplot('samples: cor')
sdist(object, 'euclidian') %>% mdsplot('samples: euclidian')
fdist(object, 'cor') %>% mdsplot('features: cor')
fdist(object, 'euclidian') %>% mdsplot('features: euclidian')
```

|------------|--------------------------|
| message_df | <i>message dataframe</i> |
|------------|--------------------------|

---

Description

message dataframe using sprintf syntax. Use place holder ' '

Usage

```
message_df(format_string, x)
```

**Arguments**

format\_string    sprintf style format string  
x                data.frame

**Value**

nothing returned

**Examples**

```
x <- data.frame(feature_id = c('F001', 'F002'), symbol = c('FEAT1', 'FEAT2'))
message_df('\t%s', x)

x <- c(rep('PASS', 25), rep('FAIL', 25))
message_df(format_string = '%s', table(x))
```

```

### Arguments

|                 |                                                                    |
|-----------------|--------------------------------------------------------------------|
| object          | data.table or SummarizedExperiment                                 |
| ...             | S3 dispatch                                                        |
| quantity        | 'p', 'effect', 'fdr', 't', or 'se'                                 |
| fit             | string (vector)                                                    |
| coef            | string (vector)                                                    |
| fvar            | 'feature_id' or other fvar for values (pvec) or names (upfeatures) |
| significancevar | 'p' or 'fdr'                                                       |
| significance    | p or fdr cutoff (fractional number)                                |
| effectdirection | '<>', '<' or '>'                                                   |
| effectsize      | effectsize cutoff (positive number)                                |

### Value

string (tvar), matrix (tmat), numeric vector (tvec), character vector (tfeatures)

### Examples

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% linmod_limma()
object %<>% linmod_lm()

effectvar(object)
effectvec(object)[1:3]
effecttdt(object)[1:3, ]
effectmat(object)[1:3, ]

tvar(object)
tvec(object)[1:3]
tdt(object)[1:3, ]
tmat(object)[1:3, ]

```

```
pvar(object)
pvec(object)[1:3]
pdt(object)[1:3, ]
pmat(object)[1:3, ]

modelfeatures(object)
downfeatures(object)
upfeatures(object)
```

|---------|-------------------------|

---

**Description**

local msigdb dir

**Usage**

```
MSIGDIR
```

**Format**

- An object of class character of length 1.

---

|          |                               |
|----------|-------------------------------|
| nfactors | <i>stri_split and extract</i> |
|----------|-------------------------------|

---

## Description

stri\_split and extract

## Usage

```
nfactors(x, sep = guess_sep(x))  
  
split_extract_fixed(x, sep, i)  
  
split_extract_regex(x, sep, i)  
  
split_extract(x, i, sep = guess_sep(x))
```

## Arguments

|     |                  |
|-----|------------------|
| x   | character vector |
| sep | string           |
| i   | integer          |

## Value

character vector

## Examples

```
# Read  
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
x <- object$sample_id[1:5]  
nfactors(x)  
  
# Split  
split_extract_fixed(x, '.', 1:2)  
split_extract_fixed(x, '.', seq_len(nfactors(x)-1))  
split_extract_fixed(x, '.', nfactors(x))  
split_extract_fixed(fdt(object)$PUBCHEM, ';', 1) # with NA values
```

|--------------------|--------------------------------|
| overall_parameters | <i>Distribution parameters</i> |
|--------------------|--------------------------------|

---

Description

Mean, sd, weight of overall/mixture distribution

Usage

```
overall_parameters(x)

mclust_parameters(x, k = NULL)

mixtools_parameters(x, k = 2)
```

Arguments

- x                    numeric vector
- k                    number of components

Value

data.table (mean, sd, weight)

Examples

```
set.seed(1)
x <- c(rnorm(20, 3), rnorm(20,7), rnorm(20, 11))
overall_parameters(x)
mclust_parameters(x)
mixtools_parameters(x)
```

---

pca

*PCA, SMA, LDA, PLS, SPLS, OPLS*

---

### Description

Perform a dimension reduction. Store sample scores, feature loadings, and dimension variances.

### Usage

```
pca(  
  object,  
  by = "sample_id",  
  assay = assayNames(object)[1],  
  ndim = 2,  
  minvar = 0,  
  center_samples = TRUE,  
  verbose = TRUE,  
  plot = FALSE,  
  ...  
)
```

```

---

**Description**

Plot contrast densities

**Usage**

```
plot_coef_densities(  
  object,  
  fit = fits(object)[1],  
  coefs = autonomics::coefs(object, fit = fit),  
  label = "feature_id"  
)
```

**Arguments**

|        |                                             |
|--------|---------------------------------------------|
| object | SummarizedExperiment                        |
| fit    | 'limma', 'lm', 'lme', 'lmer', or 'wilcoxon' |
| coefs  | character vector                            |
| label  | svar                                        |

**Value**

ggplot

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
object %<>% linmod_limma(~subgroup, block = 'Subject')  
plot_coef_densities(object)
```

---

|                    |                           |
|--------------------|---------------------------|
| plot_contrastogram | <i>Plot contrastogram</i> |
|--------------------|---------------------------|

---

**Description**

Plot contrastogram

Usage

```
plot_contrastogram(  
  object,  
  subgroupvar,  
  formula = as.formula(paste0("~ 0 +", subgroupvar)),  
  colors = make_colors(slevels(object, subgroupvar), guess_sep(object)),  
  curve = 0.1  
)
```

Arguments

|             |                                        |
|-------------|----------------------------------------|
| object      | SummarizedExperiment                   |
| subgroupvar | subgroup svar                          |
| formula     | formula                                |
| colors      | named color vector (names = subgroups) |
| curve       | arrow curvature                        |

Value

list returned by [plotmat](#)

Examples

```
if (installed('diagram')){  
  file <- download_data('halama18.metabolon.xlsx')  
  object <- read_metabolon(file)  
  plot_contrastogram(object, subgroupvar = 'subgroup')  
}

plot\_densities\_transforms

*Visually evaluate transformation effects*

---

**Description**

Visually evaluate transformation effects

**Usage**

```
plot_densities_transforms(
  object,
  assay = assayNames(object)[1],
  subgroupvar = "subgroup",
  transforms = c("center", "invnorm", "quantnorm", "vsn", "zscore"),
  ...,
```

```

    fixed = list(na.rm = TRUE, show.legend = FALSE, verbose = FALSE),
    verbose = TRUE
)

plot_violins_transforms(
  object,
  assay = assayNames(object)[1],
  subgroupvar = "subgroup",
  transforms = c("center", "invnorm", "quantnorm", "vsn", "zscore"),
  ...,
  fixed = list(na.rm = TRUE, trim = FALSE, draw_quantiles = c(0.25, 0.5, 0.75),
    show.legend = FALSE),
  verbose = TRUE
)

|-------------|---------------------------|
| plot_matrix | <i>Plot binary matrix</i> |
|-------------|---------------------------|

---

Description

Plot binary matrix

Usage

```
plot_matrix(mat)
```

Arguments

mat                   matrix

Value

no return (base R plot)

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
mat <- sdt(object)[, .(Subject, subgroup)]
mat$present <- 1
mat %<>% data.table::dcast(Subject ~ subgroup, value.var = 'present', fill = 0)
mat %<>% dt2mat()
plot_matrix(mat)
```

---

|                 |                                     |
|-----------------|-------------------------------------|
| plot_sample_nas | <i>Plot (summarized) detections</i> |
|-----------------|-------------------------------------|

---

## Description

plot\_detections plots the detection structure at feature/sample resolution. It shows systematic/random NAs (white), full detection (bright color) and imputations (light color).

## Usage

```
plot_sample_nas(...)

plot_subgroup_nas(...)

plot_detections(
  object,
  by = "subgroup",
  fill = by,
  palette = make_svar_palette(object, fill),
  axis.text.y = element_blank()
)

plot_summarized_detections(
  object,
  by = "subgroup",
  fill = by,
  palette = NULL,
  na_imputes = TRUE
)
```

## Arguments

|             |                                                |
|-------------|------------------------------------------------|
| ...         | used to maintain deprecated functions          |
| object      | SummarizedExperiment                           |
| by          | svar (string)                                  |
| fill        | svar (string)                                  |
| palette     | color vector (names = levels, values = colors) |
| axis.text.y | passed to ggplot2::theme                       |
| na_imputes  | TRUE or FALSE                                  |

## Details

plot\_summarized\_detections plots the detection structure at featuregroup/samplegroup resolution. It shows full detection and random NAs (bright color) and imputations (light color).

**Value**

ggplot object

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
plot_detections(object)
plot_detections(impute(object))
plot_summarized_detections(object)
plot_summarized_detections(impute(object))

subgroups <- sprintf('%s_STD', c('E00','E01','E02','E05','E15','E30','M00'))
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
plot_summarized_detections(object)
plot_summarized_detections(object, 'subgroup')
plot_detections(object)
plot_detections(object, 'subgroup')
```

---

plot\_subgroup\_points    *Plot features*

---

**Description**

Plot features

**Usage**

```
plot_subgroup_points(
  object,
  subgroup = "subgroup",
  block = NULL,
  x = subgroup,
  color = subgroup,
  group = block,
  facet = "feature_id",
  nrow = NULL,
  scales = "free_y",
  ...,
  palette = NULL,
  fixed = list(na.rm = TRUE),
  theme = list(axis.text.x = element_text(angle = 90, vjust = 0.5, hjust = 1))
)
```

Arguments

|          |                                        |
|----------|----------------------------------------|
| object   | SummarizedExperiment                   |
| subgroup | subgroup svar                          |

|-------------|------------------------------|
| read_msigdt | <i>Read msigdb datatable</i> |
|-------------|------------------------------|

---

Description

Read msigdb datatable

Usage

```
read_msigdt(
  file = defaultmsigfile(),
  collections = if (is.null(file)) NULL else switch(basename(file) %>% substr(nchar(.)
    - 4, nchar(.) - 3), Hs = c("C2:CP:REACTOME", "C5:GO:BP", "C5:GO:MF", "C5:GO:CC"), Mm
    = c("M2:CP:REACTOME", "M5:GO:BP", "M5:GO:MF", "M5:GO:CC"))
)
```

**Arguments**

file                   msigdb file: one of the files in dir(MSIGDB).  
collections           subset of names(MSIGCOLLECTIONS)

**Examples**

```
read_msigdt()
```

---

|            |                        |
|------------|------------------------|
| read_olink | <i>Read olink file</i> |
|------------|------------------------|

---

**Description**

Read olink file

**Usage**

```
read_olink(file, sample_excel = NULL, sample_tsv = NULL, by.y = "SampleID")
```

**Arguments**

file                   olinkfile  
sample\_excel          sample excel  
sample\_tsv           sample tsv  
by.y                  sample tsv mergeby column

**Value**

SummarizedExperiment

**Examples**

```
# Example data
npxdt <- data.table::data.table(OlinkAnalyze::npx_data1)[, c(1:11, 17)]
sampledt <- data.table::data.table(OlinkAnalyze::npx_data1)[, c(1, 12:15)]
sampledt %<>% extract(!grepl('CONTROL', SampleID))
sampledt %<>% unique()

# Write to file
file <- paste0(tempfile(), '.olink.csv')

|-------------|--------------------|
| read_salmon | <i>Read salmon</i> |
|-------------|--------------------|

---

**Description**

Read salmon

**Usage**

```
read_salmon(dir, sfile = NULL, by = NULL, ensdb = NULL)
```

**Arguments**

|       |                               |
|-------|-------------------------------|
| dir   | salmon results rootdir        |
| sfile | samplefile                    |
| by    | samplefile column to merge by |
| ensdb | EnsDb object                  |

**Value**

SummarizedExperiment

**Examples**

```
# dir <- '../bh/salmon_quants'
# sfile <- '../bh/samplesheet.csv'
# by <- 'salmonDir'
# ah <- AnnotationHub::AnnotationHub()
# ensdb <- ah[['AH98078']]
# read_salmon(dir, sfile = sfile, by = 'salmonDir', ensdb = ensdb)
```

---

|              |                        |
|--------------|------------------------|
| read_uniprot | <i>Read fasta hdrs</i> |
|--------------|------------------------|

---

**Description**

Read fasta hdrs

**Usage**

```
read_uniprot(fastafile, fastafields = FASTAFIELDS, verbose = TRUE)

parse_maxquant_hdrs(fastahdrs)

read_contaminantdt(force = FALSE, verbose = TRUE)
```

**Arguments**

|             |                                                       |
|-------------|-------------------------------------------------------|
| fastafile   | string (or character vector)                          |
| fastafields | character vector : which fastahdr fields to extract ? |
| verbose     | bool                                                  |
| fastahdrs   | character vector                                      |
| force       | whether to overwrite existing file                    |

**Value**

data.table(uniprot, protein, gene, uniprot, reviewed, existence)

**Note**

existence values are always those of the canonical isoform (no isoform-level resolution for this field)

**Examples**

```
# uniprot hdrs
fastafile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
read_uniprot_dt(fastafile)

# maxquant hdrs
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
dt <- .read_maxquant_proteingroups(file)
parse_maxquant_hdrs(dt$`Fasta headers`)

profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
prodt <- .read_maxquant_proteingroups(profile)
fosdt <- .read_maxquant_phosphosites(fosfile, profile)
parse_maxquant_hdrs(prodt$`Fasta headers`)
parse_maxquant_hdrs(fosdt$`Fasta headers`)

# contaminant hdrs
read_contaminant_dt()
```

|                       |                        |
|-----------------------|------------------------|
| rm_diann_contaminants | <i>Rm contaminants</i> |
|-----------------------|------------------------|

---

**Description**

Rm contaminants from DIA-NN SumExp

**Usage**

```
rm_diann_contaminants(object, verbose = TRUE)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- download_data('dilution.report.tsv')
object <- read_diann_proteingroups(file)
object %<>% rm_diann_contaminants()
```

---

`rm_missing_in_all_samples`*Rm features missing in some samples*

---

**Description**

Rm features missing in some samples

**Usage**

```
rm_missing_in_all_samples(object, verbose = TRUE)

rm_missing_in_some_samples(object, verbose = TRUE)
```

**Arguments**

|         |                         |
|---------|-------------------------|
| object  | SummarizedExperiment    |
| verbose | TRUE (default) or FALSE |

**Value**

updated object

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
rm_missing_in_all_samples( object)
rm_missing_in_some_samples(object)
```

---

`rm_unmatched_samples`    *rm unmatched/singleton samples*

---

**Description**

rm unmatched/singleton samples

**Usage**

```
rm_unmatched_samples(  
  object,  
  subgroupvar = "subgroup",  
  subgroupctr = slevels(object, subgroupvar)[1],  
  block,  
  verbose = TRUE  
)  
  
rm_singleton_samples(object, subgroupvar = "subgroup", verbose = TRUE)
```

**Arguments**

|             |                            |
|-------------|----------------------------|
| object      | SummarizedExperiment       |
| subgroupvar | subgroup variable (string) |
| subgroupctr | control subgroup (string)  |
| block       | block variable (string)    |
| verbose     | TRUE/FALSE                 |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')  
object <- read_somascan(file)  
object %<>% filter_samples(subgroup %in% c('t1', 't2'), verbose = TRUE)  
rm_singleton_samples(object, subgroupvar = 'Subject')  
rm_unmatched_samples(object, subgroupvar = 'subgroup', block = 'Subject')
```

---

|-------|----------------------------------|
| sbind | <i>Sample/Feature/Assay bind</i> |
|-------|----------------------------------|

---

**Description**

Sample/Feature/Assay bind

**Usage**

```
sbind(obj1, obj2)  
  
fbind(obj1, obj2)  
  
abind(obj1, obj2)
```

**Arguments**

obj1                    SummarizedExperiment: nrow1 x ncol1  
 obj2                    SummarizedExperiment: nrow2 x ncol2

**Value**

SummarizedExperiment: nrow1+nrow2 x ncol1+ncol2

**Examples**

```
# Data
obj1 <- object1()
obj2 <- object2()
biplot( pca(obj1), color = 'age')
biplot( pca(obj2), color = 'age')

# Sample bind
obj <- sbind(obj1, obj2)
biplot( pca(obj), color = 'age', shape = 'set')
sdt(obj) # SET added
fdt(obj) # common fvars with differing content pasted together

# Feature bind
obj <- fbind(obj1, obj2)
biplot( pca(obj), color = 'age', nx = 2)
fdt(obj) # SET added
sdt(obj) # common svars with differing content pasted together

# Assay bind
obj <- abind(obj1, obj2)
plot( SummarizedExperiment::assays(abind(obj1, obj2))$SET1.exprs,
      SummarizedExperiment::assays(abind(obj1, obj2))$SET2.exprs)
fdt(obj) # common fvars with differing content pasted together
sdt(obj) # common svars with differing content pasted together
```

---

scaledlibsizes

*Get tmm-scaled libsizes*

---

**Description**

Get tmm-scaled libsizes

**Usage**

```
scaledlibsizes(counts)
```

**Arguments**

counts                    counts matrix

**Value**

scaled libsize vector

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
scaledlibsizes(counts(object))
```

---

|          |                                |
|----------|--------------------------------|
| scoremat | <i>Extract scores/loadings</i> |
|----------|--------------------------------|

---

**Description**

Extract scores/loadings

**Usage**

```
scoremat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)

scores(object, method = "pca", by = biplot_by(object, method), dim = 1)

loadingmat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)

loadings(object, method = "pca", by = biplot_by(object, method), dim = 1)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| method | 'pca', 'pls', etc.   |
| by     | svar (string)        |
| dim    | numeric vector       |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% pca()
  scores(object)[1:2]
  loadings(object)[1:2]
  scoremat(object)[1:2, ]
  loadingmat(object)[1:2, ]
```

---

|         |                    |
|---------|--------------------|
| slevels | <i>Get slevels</i> |
|---------|--------------------|

---

**Description**

Get svar levels

**Usage**

```
slevels(object, svar)

subgroup_levels(object)
```

**Arguments**

|        |                                      |
|--------|--------------------------------------|
| object | SummarizedExperiment, eSet, or eList |
| svar   | sample var (character)               |

**Value**

svar values (character)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
slevels(object, 'subgroup')
subgroup_levels(object)
```

---

|        |                       |
|--------|-----------------------|
| snames | <i>Get/Set snames</i> |
|--------|-----------------------|

---

**Description**

Get/Set sample names

**Usage**

```
snames(object)

## S4 method for signature 'SummarizedExperiment'
snames(object)

snames(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
snames(object) <- value
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | string vector with sample names |

**Value**

sample names vector (get) or updated eSet (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(snames(object))
head(snames(object) %<>% paste0('SAMPLE_', .))
```

|---------------|----------------------|
| split_samples | <i>Split samples</i> |
|---------------|----------------------|

---

**Description**

Split samples by svar

**Usage**

```
split_samples(object, by = "subgroup")

cbind_imputed(objlist)

split_features(object, by)
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| by      | svar to split by (string) |
| objlist | SummarizedExperiment list |

**Value**

SummarizedExperiment list

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
objlist <- split_features(object, by = 'PLATFORM')
objlist <- split_samples(object, 'Diabetes')
objlist %<>% Map(impute, .)
object <- cbind_imputed(objlist)
```

---

|---------|-------------------------|
| stepauc | <i>Compute step auc</i> |
|---------|-------------------------|

---

**Description**

Compute step auc

**Usage**

```
stepauc(x, y, color = "group1", plot = FALSE)
```

**Arguments**

|       |                |
|-------|----------------|
| x     | numeric vector |
| y     | numeric vector |
| color | string         |
| plot  | TRUE or FALSE  |

**Value**

number

**Examples**

```
x <- c( 0, 4, 8, 27)
y <- c(100, 67, 33, 0)
stepauc(x, y, plot = TRUE)
```

---

|                |                                     |
|----------------|-------------------------------------|
| stri_any_regex | <i>Does any string have a regex</i> |
|----------------|-------------------------------------|

---

**Description**

Does any string have a regex

**Usage**

```
stri_any_regex(str, pattern)
```

**Arguments**

|         |               |
|---------|---------------|
| str     | string vector |
| pattern | string        |

**Value**

TRUE or FALSE

**Examples**

```
str <- c('s1 Spectral Count', 's1 Unique Spectral Count')
patterns <- c('Spectral Count', '(?<!Unique) Spectral Count', 'Intensity')
stringi::stri_detect_regex(str, pattern = patterns[1])
stringi::stri_detect_regex(str, pattern = patterns[2])
stringi::stri_detect_regex(str, pattern = patterns[3])
stri_any_regex(str, pattern = patterns)
```

---

stri\_detect\_fixed\_in\_collapsed

*Detect fixed patterns in collapsed strings*

---

**Description**

Detect fixed patterns in collapsed strings

**Usage**

```
stri_detect_fixed_in_collapsed(x, patterns, sep)
```

**Arguments**

|          |                                                      |
|----------|------------------------------------------------------|
| x        | vector with collapsed strings                        |
| patterns | vector with fixed patterns (strings)                 |
| sep      | collapse separator (string) or NULL (if uncollapsed) |

**Value**

boolean vector

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
x <- fdt(object)$uniprot
patterns <- c('A0A0R4IKT8', 'Q7T3G6')
table(stri_detect_fixed_in_collapsed(x = x, patterns = patterns, sep = ';'))
```

---

|                |                            |
|----------------|----------------------------|
| subgroup_array | <i>Get subgroup matrix</i> |
|----------------|----------------------------|

---

**Description**

Arrange (subgroup)levels in matrix

**Usage**

```
subgroup_array(object, subgroupvar)
subgroup_matrix(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$subgroup)
subgroup_matrix(object, 'subgroup')
```

---

|                   |                          |
|-------------------|--------------------------|
| subtract_baseline | <i>Subtract baseline</i> |
|-------------------|--------------------------|

---

**Description**

Subtract baseline level within block

**Usage**

```
subtract_baseline(
  object,
  subgroupvar,
  subgroupctr = slevels(object, subgroupvar)[1],
  block = NULL,
  assaynames = setdiff(assayNames(object), c("weights", "pepcounts")),
  verbose = TRUE
)
```

```

subtract_pairs(
  object,
  subgroupvar = "subgroup",
  subgroupctr = slevels(object, subgroupvar)[1],
  block,
  assaynames = assayNames(object)[1],
  verbose = TRUE
)

subtract_differences(object, block, subgroupvar, verbose = TRUE)

```

### Arguments

|                          |                                                    |
|--------------------------|----------------------------------------------------|
| <code>object</code>      | SummarizedExperiment                               |
| <code>subgroupvar</code> | subgroup svar                                      |
| <code>subgroupctr</code> | control subgroup                                   |
| <code>block</code>       | block svar (within which subtraction is performed) |
| <code>assaynames</code>  | which assays to subtract for                       |
| <code>verbose</code>     | TRUE/FALSE                                         |

### Details

`subtract_baseline` subtracts baseline levels within block, using the medoid baseline sample if multiple exist.

`subtract_pairs` also subtracts baseline level within block. It cannot handle multiple baseline samples, but has instead been optimized for many blocks

`subtract_differences` subtracts differences between subsequent levels, again within block

### Value

SummarizedExperiment

### Examples

```

# read
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object0 <- read_metabolon(file)
pca(object0, plot = TRUE, color = 'Time')

# subtract_baseline: takes medoid of baseline samples if multiple
object <- subtract_baseline(object0, block = 'Subject', subgroupvar = 'Time')
pca(object, plot = TRUE, color = 'Time')

# subtract_pairs: optimized for many blocks
object <- subtract_pairs(object0, block = 'Subject', subgroupvar = 'Time')

```

```

pca(object, plot = TRUE, color = 'Time')

# subtract_differences
object <- subtract_differences(object0, block = 'Subject', subgroupvar = 'Time')
values(object) %<>% na_to_zero()
pca(object, plot = TRUE, color = 'Time')

```

---

sumexplist\_to\_longdt    *SummarizedExperiment list to long data.table*

---

## Description

SummarizedExperiment list to long data.table

## Usage

```

sumexplist_to_longdt(
  sumexplist,
  svars = intersect("subgroup", autonomics::svars(sumexplist[[1]])),
  fvars = intersect("gene", autonomics::fvars(sumexplist[[1]])),
  setvarname = "set"
)

```

## Arguments

|            |                               |
|------------|-------------------------------|
| sumexplist | list of SummarizedExperiments |
| svars      | character vector              |
| fvars      | character vector              |
| setvarname | string                        |

## Value

data.table

## Examples

```

subgroups <- paste0(c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'), '_STD')

sumexp_to_widedt(object)
sumexp_to_longdt(object)
```

---

|               |                      |
|---------------|----------------------|
| summarize_fit | <i>Summarize fit</i> |
|---------------|----------------------|

---

Description

Summarize fit

**Usage**

```

summarize_fit(object, ...)

## S3 method for class 'data.table'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

## S3 method for class 'SummarizedExperiment'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

```

**Arguments**

|        |                                                 |
|--------|-------------------------------------------------|
| object | SummarizedExperiment or data.table              |
| ...    | S3 dispatch                                     |
| fit    | 'limma', 'lme', 'lm', 'lme', 'wilcoxon' or NULL |
| coefs  | string vector                                   |

**Value**

data.table(contrast, nup, ndown)

**Examples**

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% linmod_limma()
object %<>% linmod_lm()
summarize_fit(object, coefs = c('t1-t0', 't2-t0', 't3-t0'))

```

---

survobj

*Survival analysis example*

---

**Description**

Survival analysis example

**Usage**

```
survobj(verbose = TRUE)
```

**Arguments**

verbose            TRUE or FALSE

**Value**

SummarizedExperiment

**Examples**

```
survobj()
```

---

|         |                        |
|---------|------------------------|
| svalues | <i>Get/Set svalues</i> |
|---------|------------------------|

---

**Description**

Get/Set svar values

**Usage**

```
svalues(object, svar)

subgroup_values(object)

sampleid_values(object)

svalues(object, svar) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svalues(object, svar) <- value
```

**Arguments**

object            SummarizedExperiment  
svar              sample var (character)  
value              value vector

**Value**

character vector (get) or SummarizedExperiment (set)

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svalues(object, 'subgroup')
subgroup_values(object)
```

|       |                      |
|-------|----------------------|
| svars | <i>Get/Set svars</i> |
|-------|----------------------|

---

Description

Get/Set sample variables

Usage

```
svars(object)

## S4 method for signature 'SummarizedExperiment'
svars(object)

## S4 method for signature 'MultiAssayExperiment'
svars(object)

svars(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svars(object) <- value

## S4 replacement method for signature 'MultiAssayExperiment,character'
svars(object) <- value
```

Arguments

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | string factor with variable names |

Value

sample variable names (get) or updated SummarizedExperiment

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svars(object)[1]
(svars(object)[1] %<>% paste0('1'))
```

---

|                |                                     |
|----------------|-------------------------------------|
| systematic_nas | <i>Is systematic/random/full NA</i> |
|----------------|-------------------------------------|

---

**Description**

Is systematic/random/full NA

**Usage**

```
systematic_nas(object, by = "subgroup", frac = 0.5)

random_nas(object, by = "subgroup")

no_nas(object)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| by     | svar (string)        |
| frac   | fraction             |

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
table(systematic_nas(object)) # missing in some subgroups, present in others
table(random_nas(object))    # missing in some samples, independent of subgroup
table(no_nas(object))        # missing in no samples
```

---

|              |                     |
|--------------|---------------------|
| tag_features | <i>Tag features</i> |
|--------------|---------------------|

---

**Description**

Tag features

**Usage**

```
tag_features(
  object,
  keyvar,
  sep,
  features,
  tagvar = get_name_in_parent(features),
  verbose = TRUE
)
```

**Arguments**

|          |                                     |
|----------|-------------------------------------|
| object   | SummarizedExperiment                |
| keyvar   | string : intersection fvar          |
| sep      | string : keyvar collapse separator  |
| features | character vector : intersection set |
| tagvar   | string :                            |
| verbose  | TRUE or FALSE                       |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')
object <- read_somascan(file)
features <- AnnotationDbi::keys(org.Hs.eg.db::org.Hs.eg.db, keytype = 'SYMBOL')
object %<>% tag_features(keyvar = 'EntrezGeneSymbol', sep = ' ', features)
table(fdt(object)$features)
```

---

|                 |                        |
|-----------------|------------------------|
| tag_hdlproteins | <i>Tag hdlproteins</i> |
|-----------------|------------------------|

---

**Description**

Tag hdlproteins

**Usage**

```
tag_hdlproteins(object, verbose = TRUE)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% tag_hdlproteins()
fdt(object)
```

---

|                  |                        |
|------------------|------------------------|
| TAXON_TO_ORGNAME | <i>Annotation Maps</i> |
|------------------|------------------------|

---

**Description**

Annotation Maps

**Usage**

TAXON\_TO\_ORGNAME  
ABBREV\_TO\_ORGNAME  
REVIEWED\_TO\_NUMBER  
EXISTENCE\_TO\_NUMBER

**Format**

An object of class character of length 7.  
An object of class character of length 4.  
An object of class character of length 2.  
An object of class numeric of length 4.

**Examples**

```
TAXON_TO_ORGNAME['9606']  
ABBREV_TO_ORGNAME['HSA']  
REVIEWED_TO_NUMBER['reviewed']  
EXISTENCE_TO_NUMBER['Evidence at protein level']
```

|-------|---------------------------------------------------|
| TESTS | <i>Statistical models supported in autonomics</i> |
|-------|---------------------------------------------------|

---

**Description**

Statistical models supported in autonomics

**Usage**

TESTS

**Format**

An object of class character of length 5.

Examples

TESTS

---

|     |                    |
|-----|--------------------|
| tpm | <i>Get/Set tpm</i> |
|-----|--------------------|

---

Description

Get / Set tpm matrix

Usage

```
tpm(object)

## S4 method for signature 'SummarizedExperiment'
tpm(object)

tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
tpm(object) <- value
```

Arguments

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | tpm matrix (features x samples) |

Value

tpm matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file, plot=FALSE)
tpm(object) <- values(object)
tpm(object)[1:3, 1:3]
```

---

|                  |                                    |
|------------------|------------------------------------|
| TRANSFORMENGINES | <i>Data Transformation Methods</i> |
|------------------|------------------------------------|

---

**Description**

Data Transformation Methods

**Usage**

TRANSFORMENGINES

TRANSFORMSTRICT

**Format**

An object of class character of length 7.

An object of class character of length 5.

**Details**

- TRANSFORMENGINES: c('center', 'center\_mean', 'center\_median', 'invnorm', 'quantnorm', 'vsn', 'zscore')
- TRANSFORMSTRICT: c('center', 'invnorm', 'quantnorm', 'vsn', 'zscore')

---

|                  |                         |
|------------------|-------------------------|
| twofactor_sumexp | <i>twofactor sumexp</i> |
|------------------|-------------------------|

---

**Description**

twofactor sumexp

**Usage**

twofactor\_sumexp()

**Value**

SummarizedExperiment

---

|            |                              |
|------------|------------------------------|
| uncollapse | <i>Uncollapse/Recollapse</i> |
|------------|------------------------------|

---

**Description**

Uncollapse data.table cols

**Usage**

```
uncollapse(dt, ..., sep = ";")  
  
recollapse(dt, by, sep = ";")
```

**Arguments**

|     |            |
|-----|------------|
| dt  | data.table |
| ... | cols       |
| sep | string     |
| by  | string     |

**Examples**

```
# Example data  
(dt <- data.table::data.table(  
  uniprot = 'Q9BQL6;Q96AC1;Q96AC1-3',  
  protein = 'FERM1_HUMAN;FERM2_HUMAN',  
  gene    = 'FERMT1;FERMT2',  
  family  = 'FERM'))  
  
# Uncollapse  
uncollapse(dt, protein, gene, sep = ';')  
recollapse( uncollapse(dt, protein, gene, sep = ';'), by = 'uniprot')  
  
# Unchanged when no sep  
uncollapse(dt, family, sep = ';')  
uncollapse(dt, family, sep = 'NOSEP')
```

---

|        |                            |
|--------|----------------------------|
| values | <i>Get/Set expr values</i> |
|--------|----------------------------|

---

**Description**

Get/Set value matrix

**Usage**

```

values(object)

## S4 method for signature 'SummarizedExperiment'
values(object)

values(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
values(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
values(object) <- value

```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | ratio matrix (features x samples) |

**Value**

value matrix (get) or updated object (set)

**Examples**

```

file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
values(object)[1:3, 1:3]
values(object) <- 0
values(object)[1:3, 1:3]

```

---

varlevels\_dont\_clash    *Are varlevels unique*

---

**Description**

Are varlevels unique

**Usage**

```

varlevels_dont_clash(object, ...)

## S3 method for class 'data.table'
varlevels_dont_clash(object, vars = names(object), ...)

## S3 method for class 'SummarizedExperiment'
varlevels_dont_clash(object, vars = svars(object), ...)

```

Arguments

|        |                                    |
|--------|------------------------------------|
| object | SummarizedExperiment or data.table |
| ...    | required for s3 dispatch           |
| vars   | character vector                   |

Value

TRUE or FALSE

Examples

```
require(data.table)
object1 <- data.table(expand.grid(genome = c('WT', 'MUT'), treat = c('control', 'drug')))
object2 <- data.table(expand.grid(mutant = c('YES', 'NO'), treated = c('YES', 'NO')))
varlevels_dont_clash(object1)
varlevels_dont_clash(object2)
```

---

|              |                     |
|--------------|---------------------|
| venn_detects | <i>Venn detects</i> |
|--------------|---------------------|

---

Description

Venn diagram full/consistent/random detects

Usage

```
venn_detects(object, by = "subgroup")
```

Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| by     | svar (string)        |

Value

NULL

Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
venn_detects(object, 'subgroup')
```

---

|         |                        |
|---------|------------------------|
| weights | <i>Get/Set weights</i> |
|---------|------------------------|

---

**Description**

Get/Set weight matrix

**Usage**

```
weights(object, ...)  
  
## S4 method for signature 'SummarizedExperiment'  
weights(object)  
  
weights(object) <- value  
  
## S4 replacement method for signature 'SummarizedExperiment,matrix'  
weights(object) <- value  
  
## S4 replacement method for signature 'SummarizedExperiment,numeric'  
weights(object) <- value  
  
## S4 replacement method for signature 'SummarizedExperiment,NULL'  
weights(object) <- value
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| ...    | additional params                 |
| value  | ratio matrix (features x samples) |

**Value**

weight matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')  
object <- read_rnaseq_counts(file)  
weights(object)[1:3, 1:2]  
weights(object) <- 1  
weights(object)[1:3, 1:2]
```

---

|          |                 |
|----------|-----------------|
| write_xl | <i>Write xl</i> |
|----------|-----------------|

---

**Description**

Write xl

**Usage**

```
write_xl(  
  object,  
  file,  
  fitcoefs = autonomics::fitcoefs(object),  
  assays = assayNames(object)[0],  
  verbose = TRUE  
)  
  
write_ods(  
  object,  
  file,  
  fitcoefs = autonomics::fitcoefs(object),  
  assays = assayNames(object)[0],  
  verbose = TRUE  
)
```

**Arguments**

|          |                      |
|----------|----------------------|
| object   | SummarizedExperiment |
| file     | file                 |
| fitcoefs | character vector     |
| assays   | assayNames subset    |
| verbose  | TRUE or FALSE        |

**Value**

filepath

**Examples**

```
# linmod  
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
object %<>% linmod_limma(~Diabetes/Time)  
xlfile <- file.path(tempdir(), 'linmod.atkin.metabolon.xlsx')  
odsfile <- file.path(tempdir(), 'linmod.atkin.metabolon.ods' )  
write_xl( object, xlfile) # linmod.xlsx: fdt + stats  
write_xl( object, xlfile, assays = SummarizedExperiment::assayNames(object)[1] ) # fdt + stats + a
```

```
write_xl( object, xlfile, assays = SummarizedExperiment::assayNames(object)[1:2])      # fdt + stats + a
write_ods(object, odsfile)                                                           # ods: fdt + stats

# awblinmod
object <- read_metabolon(file)
object %<>% awblinmod_limma(c('Diabetes', 'Time'), block = 'Subject')
xlfile <- file.path(tempdir(), 'awblinmod.atkin.metabolon.xlsx')
odsfile <- file.path(tempdir(), 'awblinmod.atkin.metabolon.ods')
write_xl( object, xlfile)                                                           # awblinmod xlsx: fdt + stats
write_xl( object, xlfile, assay = SummarizedExperiment::assayNames(object)[1] )      # fdt + stats +
write_xl( object, xlfile, assay = SummarizedExperiment::assayNames(object)[1:2])      # fdt + stats +
write_ods(object, odsfile)                                                           # ods: fdt + stats
write_ods(object, odsfile, assay = SummarizedExperiment::assayNames(object)[1] )      # fdt + stats +
write_ods(object, odsfile, assay = SummarizedExperiment::assayNames(object)[1:2])      # fdt + stats +
```

---

|   |                        |
|---|------------------------|
| X | Model based prediction |
|---|------------------------|

---

**Description**

Model based prediction

**Usage**

```
X(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  coding = "code_control"
)

beta(object, fit = fits(object)[1])
```

**Arguments**

|         |                                    |
|---------|------------------------------------|
| object  | SummarizedExperiment or data.frame |
| formula | formula                            |
| drop    | TRUE or FALSE                      |
| coding  | string: codingfunname              |
| fit     | 'limma', 'lm', 'lme', 'wilcoxon'   |

**Value**

beta matrix (nlevel x nfeature)

**Examples**

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% linmod_limma(block = 'Subject', coefs = model_coefs(object)) # intercept required!
beta(object)                #   betas : nlevel x nfeature
X(object)                   #   design : nlevel x nlevel
X(object) %*% beta(object)  # response : nlevel x nfeature

```

---

zero\_to\_na

---

*Change nondetect representation*

---

**Description**

Change nondetect representation

**Usage**

```

zero_to_na(x, verbose = FALSE)

nan_to_na(x, verbose = FALSE)

na_to_zero(x, verbose = FALSE)

inf_to_na(x, verbose = FALSE)

minusinf_to_na(x, verbose = FALSE)

na_to_string(x)

```

**Arguments**

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | logical(1) |

**Value**

Updated matrix

**Examples**

```

matrix(c(0, 7), nrow=1)
matrix(c(0, 7), nrow=1) %>% zero_to_na(verbose=TRUE)

matrix(c(NA, 7), nrow=1)
matrix(c(NA, 7), nrow=1) %>% na_to_zero(verbose=TRUE)

matrix(c(NaN, 7), nrow=1)
matrix(c(NaN, 7), nrow=1) %>% nan_to_na(verbose=TRUE)

```

```
matrix(c(Inf, 7), nrow=1)
matrix(c(Inf, 7), nrow=1) %>% inf_to_na(verbose=TRUE)

matrix(c(-Inf, 7), nrow=1)
matrix(c(-Inf, 7), nrow=1) %>% minusinf_to_na(verbose=TRUE)
```
